OM protein - protein search, using sw model

Run on: December 29, 2005, 17:12:57 ; Search time 12.9677 Seconds
(without alignments)
44.518 Million cell updates/sec

Title: US-10-009-122-17
Perfect score: 29
Sequence: 1 KVVFFA 6

Scoring table: BLOSUM62
Gapop 10.0 , Gapext 0.5

Searched: 283416 seqs, 96216763 residues

Total number of hits satisfying chosen parameters: 283416

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%
Maximum Match 100%
Listing first 300 summaries

Database : PIR 80:*
1: pir1:*
2: pir2:*
3: pir3:*
4: pir4:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

RESULT-1
US-09-867-847-18
; Sequence 18, Application US/09867847
; Patent No. US20020094335A1
; GENERAL INFORMATION:
; APPLICANT: Chalifour, Robert
; APPLICANT: Hebert, Lise
; APPLICANT: Kong, Xiangqi
; APPLICANT: Gervais, Francine
; TITLE OF INVENTION: VACCINE FOR THE PREVENTION AND TREATMENT OF ALZHEIMER'S
; FILE REFERENCE: 14445-501 CIP
; CURRENT APPLICATION NUMBER: US/09/867, 847
; CURRENT FILING DATE: 2001-09-20

; PRIOR APPLICATION NUMBER: 60/168,594
; PRIOR FILING DATE: 1999-11-29
; PRIOR APPLICATION NUMBER: 09/724,842
; PRIOR FILING DATE: 2000-11-28
; NUMBER OF SEQ ID NOS: 65
; SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 18
; LENGTH: 6
; TYPE: PRT
; ORGANISM: Artificial Sequence
; FEATURE:

US-09-747-408-9
; Sequence 9, Application US/09747408
; Patent No. 6670399
; GENERAL INFORMATION:
; APPLICANT: Green, Allan M.
; APPLICANT: Gervais, Francine
; TITLE OF INVENTION: Compounds And Methods For Modulating
; TITLE OF INVENTION: Cerebral Amyloid Angiopathy
; FILE REFERENCE: NBI-088
; CURRENT APPLICATION NUMBER: US/09/747,408
; CURRENT FILING DATE: 2000-12-22
; PRIOR APPLICATION NUMBER: 60/171,877
; PRIOR FILING DATE: 1999-12-23

; NUMBER OF SEQ ID NOS: 24
; SOFTWARE: FastSeq for Windows Version 4.0
; SEQ ID NO 9
; LENGTH: 6
; TYPE: PRT
; ORGANISM: Homo sapiens

PT which elicits production of antibodies to prevent fibrillogenesis and
 PT associated cellular toxicity.

XX Disclosure; Page 11; 31pp; English.

XX The present sequence is that of an all-D peptide suitable for use in
 CC preparing vaccines for preventing or treating Alzheimer's disease and
 CC other amyloid related disorders in humans. It is based on a portion of
 CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
 CC inserting 1 or more amino acid residues, or by substituting 1 or more
 CC amino acid residues with other amino acid residues or non-amino acid
 CC fragments. Vaccines of the invention are produced using 'non-self'
 CC peptides synthesised from the unnatural D-configuration amino acids to
 CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 CC aggregated to be operative or immunogenic. They preferably interact with
 CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 CC GAG-binding site region, the amyloid-beta peptide, or their immunogenic
 CC fragments, protein conjugates, immunogenic derivative peptides and
 CC immunogenic peptidomimetics. Examples include all-D peptides
 CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
 CC related diseases may be localised amyloidosis, e.g. diabetes type II,
 CC neurodegenerative diseases, e.g. bovine spongiform encephalitis, and
 CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 CC prion protein related disorders, or systemic amyloidosis associated with
 CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
 CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 CC amyloidosis found in long-term haemodialysis patients

XX New amyloid-targeting imaging agents useful for in vivo imaging amyloid
 PT plaques and/or for the treatment of amyloidosis disorders.

XX Claim 49; Page 21; 57pp; English.

XX The invention relates to an amyloid-targeting imaging agent comprising an
 CC amyloid targeting moiety, a linker moiety and a labelling moiety. The
 CC agent is of general formula A t-(A l n k) z-A l a b (l) where z = 0 - 1;
 CC A t = an amyloid targeting moiety; A l n k = a linker moiety; and A l a b
 CC = a labelling moiety. Also included are imaging amyloid deposition or
 CC diagnosing an amyloid-related condition in a patient involving
 CC administering (I) to the patient, and ultrasound imaging (I) in the
 CC patient to determine the presence of amyloid or amyloid-related condition
 CC ; and a kit for preparing a radiopharmaceutical preparation comprising
 CC (I), a reducing agent, a buffering agent, a transchelating agent, and
 CC instructions for the preparation and use of the radiopharmaceutical in
 CC the imaging of amyloid or an amyloid-related condition. The agents are
 CC used for imaging amyloid deposition and for diagnosing an amyloid related
 CC condition e.g. Creutzfeldt-Jakob disease (CJD), Kuru, transmissible
 CC cerebral amyloidosis (transmissible virus dementia), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, feline spongiform encephalopathy, non-transmissible
 CC cerebral amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC dialysis-related amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiopathy. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

XX WPI; 2003-201269/19.
XX Prevention and/or treatment of an amyloid-related disease e.g.
XX Alzheimer's disease, comprises use of all-D-amyloid-beta peptides.
XX Claim 1; Page 59; 44pp; English.
XX The invention relates to a method for prevention and/or treatment of an
XX amyloid-related disease which comprises administration of an all-D -
XX amyloid-beta peptide. The method is used for preventing and/or treating
XX Alzheimer's and other amyloid related disease e.g. cerebral amyloid
XX angiopathy; for altering serum levels of amyloid-beta in a mammal and
XX favours the clearance of soluble amyloid-beta or fibril amyloid-beta from
XX the mammal; and reducing or inhibiting the formation of plaques. It is
XX also used for treating AA (reactive) amyloid diseases including
XX inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic
XX arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy,
XX Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's
XX disease. AA deposits are also produced as a result of chronic microbial
XX infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
XX ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
XX Certain malignant neoplasms can also result in AA fibril amyloid deposits
XX including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung
XX and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The
XX present sequence is an Abeta peptide used to illustrate the method of the
XX invention

 CC The invention relates to an amyloid-targeting imaging agent. The imaging
 CC agent comprises an amyloid targeting moiety (such as a peptide) joined to
 CC a labeling moiety via a linking moiety, and is preferably able to cross
 CC the blood-brain barrier. The invention also relates to a kit for
 CC preparing a radiopharmaceutical preparation from the imaging agent of the
 CC invention, a method for imaging amyloid deposition in a patient and a
 CC method for diagnosing an amyloid-related condition in a patient. The
 CC amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-
 CC related conditions such as Creutzfeld-Jakob disease (CJD), Kuru,
 CC transmissible cerebral amyloidoses (also known as transmissible virus
 CC dementias), familial CJD, scrapie, transmissible mink encephalopathy,
 CC bovine spongiform encephalopathy (BSE), inflammation-associated amyloid,
 CC type II diabetes, primary amyloidosis, feline spongiform encephalopathy,
 CC non-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-
 CC mediated diseases, dialysis-related amyloidosis, light chain-related
 CC amyloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a
 CC patient. The agent does not exhibit excessive toxicity or irritation,
 CC does not induce an allergic response, and permits an earlier diagnosis of
 CC amyloid-related conditions, thereby allowing earlier treatment and hence
 CC prevention of the undesirable effects of such disorders. Sequences
 CC ADY37921-ADY37947 and ADY37949 represent peptides which may be used as
 CC the amyloid-targeting moiety in an imaging agent of the invention.

 PT Novel nucleic acid molecule antisense to nucleic acid sequence encoding
 PT prolamine, useful for reducing expression dose of protein in seed, and
 PT for producing transgenic plant, preferably rice plant having reduced
 PT storage protein.
 XX
 FS Example 13; SEQ ID NO 117; 272pp; Japanese.
 XX
 CC The present invention describes a nucleic acid molecule (I) comprising a
 CC consecutive nucleic acid sequence (S1) of at least 15 bp in length and
 CC complementary with a nucleic acid sequence encoding a prolamine
 CC polypeptide or a nucleic acid sequence having a homology of at least
 CC about 70% to (S1). Also described: (1) a nucleic acid molecule (N1)
 CC comprising a nucleic acid sequence (A) having about 70% homology to a
 CC nucleic acid sequence encoding a prolamine polypeptide and a nucleic acid
 CC sequence (B) having about 70% homology to the complement of the nucleic
 CC acid sequence encoding a prolamine polypeptide; (2) a factor (II) capable
 CC of causing RNA interference of the gene sequence encoding a prolamine
 CC polypeptide; (3) a nucleic acid cassette (III) containing (1); (4)
 CC producing (III); (5) a vector (IV) comprising (1); (6) a plant cell (V)
 CC containing (1); (7) a plant tissue (VI) comprising (V); (8) a plant (VII)
 CC comprising (1) or (V); (9) a seed (VIII) produced by (VII); (10) starch
 CC preparation produced from (VII) or (VIII); and (11) a composition
 CC containing gene product of foreign gene produced from (VII) or (VIII).
 CC (I) is useful for decreasing the expression level of a protein in the
 CC seed of a plant, for expressing a foreign gene in the seed of a plant and
 CC for decreasing the expression of a natural protein in the seed of a
 CC plant. The method of decreasing the amount of expression level of a
 CC protein in the seed of a plant involves providing (I), introducing (I)
 CC into the cell of the plant, redifferentiating the cell, producing a
 CC transgenic plant, and obtaining the seed from the transgenic plant. The
 CC method after the step of introduction, further involves selecting the
 CC cell introduced with (I), by determining resistance with respect to
 CC antibiotics. The method of expressing a foreign gene in the seed of a
 CC plant, involves providing (I) and the nucleic acid molecule encoding a
 CC foreign gene product, introducing (I) and the nucleic acid molecule
 CC encoding a foreign gene product into cell of the plant, re-
 CC differentiating the cell, producing a transgenic plant, and obtaining the
 CC seed from the transgenic plant. The method further involves isolating the
 CC gene product of the foreign gene from the seed. (I) is useful for
 CC producing transgenic plants having reduced expression of storage proteins
 CC and for reducing the expression dose of a protein in a seed of a plant.
 CC The present sequence represents a rice 26kDa globulin signal sequence,
 XX which is used in the exemplification of the present invention.

 PT Novel DNA having sequence encoding allergen specific T-cell epitope
 PT peptide, useful for accumulating T-cell epitope peptide in plants and for
 PT treating allergic diseases such as pollinosis.
 XX
 XX Disclosure; SEQ ID NO 5; 79pp; Japanese.
 XX
 CC This invention relates to a DNA (I) having a sequence under the control
 CC of a storage protein promoter, chosen from a sequence encoding storage
 CC protein signal sequence at the 5' end of a sequence encoding allergen
 CC specific T cell epitope peptide and/or a sequence encoding vesicle
 CC anchoring signal sequence at the 3' end, and a DNA sequence encoding a
 CC polypeptide having allergen specific T-cell epitope peptide inserted in
 CC the variable region of a storage protein. Also disclosed is a vector (II)
 CC for T-cell epitope accumulated plant preparation, and a method of
 CC accumulating allergen specific T-cell epitope in a plant. The method
 CC involves introducing (I) or (II) to a plant, obtaining DNA encoding
 CC allergen specific T-cell epitope peptide, adding a DNA encoding a storage
 CC protein signal sequence to the 5' end and/or a vesicle anchoring signal
 CC sequence to the 3' end of the obtained DNA, and expressing the DNA in a
 CC plant under the control of a storage protein promoter, or obtaining DNA
 CC encoding allergen specific T-cell epitope peptide, inserting a DNA into
 CC the variable region of storage protein of the plant and expressing the
 CC peptide in the transgenic plant. The invention describes the accumulation
 CC of human T cell epitope in rice albumen, a method of accumulating T cell
 CC epitope-attached peptide (7crp) in seeds, a method of inserting the 7crp
 CC into the variable region of glutenin (the major storage protein of rice),
 CC and expressing and accumulating 7crp as part of the glutenin. The rice
 CC capable of producing the 7crp is useful as an edible vaccine against
 CC Japanese (Cryptomeria japonica) cedar pollen antigen. The pollen allergen
 CC is Cry11 or Cry12. The T-cell epitope is integrated on an edible region
 CC such as the seed of a plant. The method of the invention is useful for
 CC producing a plant accumulated with allergen specific T-cell epitope, and
 CC manufacturing a transgenic plant, preferably rice, integrated with T-cell
 CC epitope. The method is useful for preventing or treating allergic disease
 CC such as hay fever. The method enables the production of allergen specific
 CC T-cell epitope at a low cost and also reduces the amount for
 CC administration. The allergen specific T-cell epitope accumulated in a
 CC seed is stable for storage. This sequence represents rice 26 kDa peptide.

 PT Identifying modulators of AMP-activated protein kinase-mediated
 PT activation of a nitric oxide synthase (NOS), for use in ischemic heart
 PT disease, comprises testing for the increase or decrease in
 PT phosphorylation of NOS.
 XX
 PS Example 4; Fig 5; 4lpp; English.
 XX
 CC The present sequence is the calmodulin (CaM)-binding region of mouse
 CC inducible nitric oxide synthase (iNOS). iNOS is one of three isoforms of
 CC the enzyme NOS, which synthesises nitric oxide from the amino acid L-
 CC arginine. The sequence is provided for comparison with endothelial nitric
 CC oxide synthase (eNOS). The threonine residue at position 495 of eNOS is
 CC phosphorylated by AMP-activated protein kinase (AMPK) in the absence of
 CC Ca2+-CaM. Phosphorylation results in inhibition of eNOS. In the presence
 CC of Ca2+-CaM, phosphorylation by AMPK occurs predominantly at Ser-1177 and
 CC eNOS is activated. Modulators which activate AMPK may be used in the
 CC treatment of ischaemic heart disease by promoting glucose and fatty acid
 CC metabolism, and improving nutrient and oxygen supply to the myocytes.
 CC They may also be used for the treatment of pulmonary hypertension and
 CC obstructive airways disease

 XX XX
 XX PS Example 1; SEQ ID NO 7; 57pp; English.
 XX XX
 XX CC The present sequence represents the calmodulin-binding site of mouse iNOS
 XX CC amino acid sequence. The present invention describes endothelial nitric
 XX CC oxide synthase (eNOS) mutants having one or more mutations in an amino
 XX CC acid sequence corresponding to a functional domain of a mammalian eNOS.
 XX CC At least one of the mutations is at a position corresponding to an amino
 XX CC acid residue in a calmodulin-binding domain that is phosphorylated in
 XX CC mammalian cells, and not an amino acid substitution to Ala or Asp. Also
 XX CC described: (1) an isolated eNOS polypeptide mutant that is substantially
 XX CC homologous, or has a 95-99% sequence identity to the amino acid sequence
 XX CC of the novel eNOS polypeptide mutant; (2) an isolated polynucleotide
 XX CC encoding the polypeptide mutant; (3) a recombinant vector comprising the
 XX CC polynucleotide operably linked to at least one regulatory sequence; (4) a
 XX CC pharmaceutical composition comprising the polypeptide mutant or the
 XX CC polynucleotide; (5) a binding partner of the polypeptide mutant; (6)
 XX CC modulating eNOS activity in a cell by administering to the cell the
 XX CC polypeptide mutant; (7) modulating eNOS activity in a cell by
 XX CC administering the polypeptide mutant or the polynucleotide to the cell,
 XX CC such that the polypeptide mutant is expressed in the cell; (8) diagnosing
 XX CC a condition associated with aberrant eNOS activity by contacting a cell
 XX CC of a patient with the polynucleotide, and detecting a level of eNOS
 XX CC activity indicative of the medical condition; and (9) prophylactic and
 XX CC therapeutic methods of treating a condition associated with aberrant eNOS
 XX CC activity by administering the polypeptide mutant or polynucleotide to the
 XX CC patient. The eNOS mutant has vasotropic, antiarteriosclerotic,
 XX CC hypotensive, antidiabetic, vulnary, antilipaseic and anorectic
 XX CC activities, and has reduced calcium dependence and increased activity.
 XX CC The polypeptide mutant, polynucleotide and methods are useful for
 XX CC diagnosing or treating a condition associated with aberrant eNOS
 XX CC activity, e.g. ischaemia, atherosclerosis, hypertension, diabetes,
 XX CC Raynaud's phenomenon, poor wound healing, hyperlipidaemia or obesity.

 XX PT obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
 XX PT diagnostic, forensic, gene therapy and chromosome mapping procedures.
 XX PS Claim 13; SEQ ID NO 6921; 71pp + Sequence Listing; English.
 XX XX
 XX CC The present sequence is a polypeptide encoded by one of a large number of
 XX CC 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were
 XX CC prepared from total human RNAs or polyA+ RNAs derived from 30 different
 XX CC tissues. EST sequences usually correspond mainly to the 3' untranslated
 XX CC region (UTR) of the mRNA because they are often obtained from oligo-dT
 XX CC primed cDNA libraries. Such ESTs are not well suited for isolating cDNA
 XX CC sequences derived from the 5' ends of mRNAs and even in those cases where
 XX CC longer cDNA sequences have been obtained, the full 5' UTR is rarely
 XX CC included. 5' ESTs are derived from mRNAs with intact 5' ends and can
 XX CC therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs
 XX CC are also used in diagnostic, forensic, gene therapy and chromosome
 XX CC mapping procedures. They are used to obtain upstream regulatory sequences
 XX CC and to design expression and secretion vectors

 CC The invention relates to human polynucleotides (AAI79941-AAI93841) and
 CC the encoded proteins (AAO0010-AAO13910) that exhibit activity elating to
 CC cytokine, cell proliferation or cell differentiation or which may induce
 CC production of other cytokines in other cell populations. The
 CC polynucleotides and polypeptides are useful in gene therapy, vaccines or
 CC peptide therapy. The polypeptides have various cytokine-like activities,
 CC e.g. stem cell growth factor activity, haematopoiesis regulating
 CC activity, tissue growth factor activity, immunomodulatory activity and
 CC activin/inhibin activity and may be useful in the diagnosis and/or
 CC treatment of cancer, leukaemia, nervous system disorders, arthritis and
 CC inflammation. Note: The sequence data for this patent did not form part
 CC of the printed specification, but was obtained in electronic format
 CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

 PT New plant genes encoding polypeptides having an activity involved in or
 PT associated with the synthesis, metabolism or degradation of carbohydrates
 PT in the plant grain useful in generating plants having improved
 PT nutritional properties.
 XX
 XX Claim 15; SEQ ID NO 228; 130pp; English.
 XX
 CC This invention, in the area of plant biotechnology, relates to novel
 CC polynucleotides comprising a nucleotide sequence encoding a protein which
 CC is involved in or associated with the synthesis, metabolism or
 CC degradation of carbohydrates in the plant grain and the expression of
 CC which is up-regulated during grain filling. The plant is selected from
 CC corn, tomato, banana, canola, cotton, peanut, sorghum, tobacco,
 CC sugarbeet, wheat, and rice. The invention may be useful for the
 CC improvement of protein, oil, starch, fibre and moisture content of the
 CC cereal grains. In addition, carbohydrate levels may be modified to a more
 CC desirable level using the present invention. The present sequence is the
 CC amino acid sequence of a rice protein of the invention. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/publishedpct_sequences.

XX
XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patient's own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/hematopoietic-related diseases, especially
CC cancers and cancer metastases of hematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/hematopoietic antigen genomic

CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

XX CC This invention relates to novel nucleic acids encoding human PRO secreted
XX CC and transmembrane proteins. Extracellular proteins play important roles
XX CC in the formation, differentiation and maintenance of multicellular
XX CC organisms. The fate of many individual cells (for example proliferation,
XX CC migration or differentiation) is typically governed by information
XX CC received from other cells and the immediate environment. The information
XX CC is often transmitted by secreted polypeptides (for example mitogenic
XX CC factors, survival factors, cytotoxic factors, differentiation factors,
XX CC neuropeptides and hormones) which are received and interpreted by diverse
XX CC cell receptors or membrane bound proteins. These membrane bound proteins
XX CC and receptors may be of use as pharmaceutical and diagnostic agents, such
XX CC as in the blocking of receptor-ligand interactions. The current invention
XX CC provides the amino acid sequences of novel human membrane bound receptors
XX CC and proteins, along with the cDNA sequences encoding them. The novel
XX CC proteins of the invention may have cytostatic activities through the
XX CC stimulation of chondrocytes. The nucleic acids of the invention may be
XX CC useful for the manufacture of a medicament for diagnosing or treating a
XX CC tumour in a mammal. In addition, they may be useful for measuring or
XX CC detecting the expression of a tumour associated gene. The present
XX CC sequence is the amino acid sequence of a human PRO protein of the
XX CC invention.

XX
XX Claim 1; SEQ ID NO 2031; 180pp; English.
XX
XX
XX This invention relates to novel mitochondrial targets that can be used
XX for therapeutic intervention in treating a disease associated with
XX altered mitochondrial function. Specifically, it refers to a method for
XX identifying proteins of the human heart mitochondrial proteome that are
XX useful for drug screening assays, as well as therapeutic targets. The
XX present invention describes a method for identifying such proteins that
XX can be used in the treatment of various diseases associated with altered
XX mitochondrial function including diabetes mellitus, Huntington's disease,
XX osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial
XX encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy
XX ragged red fibre syndrome (MERRF) or cancer. Accordingly, these
XX compositions have neuroprotective, neurotropic, antidiabetic,
XX anticonvulsant, antiarthritic, osteopathic, ophthalmological and
XX cytostatic activities. This polypeptide sequence is a human heart
XX mitochondrial protein of the invention.

XX Testing for bronchial asthma or chronic obstructive pulmonary disease by
XX comparing the expression level of a marker gene in a biological sample
XX from a subject with the expression level of the gene in a sample from a
XX healthy subject.
XX
XX Example 11; SEQ ID NO 680; 241pp; English.
XX
XX The present invention describes a method of testing for bronchial asthma
XX or chronic obstructive pulmonary disease. The method comprises
XX determining the expression level of a marker gene in a biological sample
XX from a subject, comparing the expression level determined with the
XX expression level of the marker gene in a biological sample from a healthy
XX subject, and judging whether the subject has bronchial asthma or chronic
XX obstructive pulmonary disease. The marker gene comprises: (a) a group of
XX genes (S1) whose expression levels increase when respiratory epithelial
XX cells are stimulated with interleukin-13; or (b) a group of genes (S2)
XX whose expression levels decrease when respiratory epithelial cells are
XX stimulated with interleukin-13. Also described: (1) a reagent (1) for
XX testing for bronchial asthma or chronic obstructive pulmonary disease;
XX (2) a kit for screening for a candidate compound for a therapeutic agent
XX to treat bronchial asthma or chronic obstructive pulmonary disease; (3)
XX an animal model for bronchial asthma or chronic obstructive pulmonary
XX disease; (4) an inducer that induces bronchial asthma in a mouse; (5) a
XX method for producing an animal model for bronchial asthma or chronic
XX obstructive pulmonary disease; (6) a therapeutic agent for bronchial
XX asthma or chronic obstructive pulmonary disease, comprising the compound,
XX a marker gene or an antisense nucleic acid corresponding to a portion of
XX the marker gene, a ribozyme, a polynucleotide that suppresses the
XX expression of the gene through an RNAi effect or an antibody recognising
XX a protein encoded by a marker gene; and (7) a DNA chip for testing for
XX bronchial asthma or a chronic obstructive pulmonary disease, on which a
XX probe has been immobilised to assay a marker gene. (1) has respiratory
XX and antiasthmatic activities, and can be used in gene therapy. The method
XX is useful for testing for or screening for a therapeutic agent for
XX bronchial asthma or chronic obstructive pulmonary disease. The present
XX sequence is used in the exemplification of the present invention.

XX Testing for bronchial asthma or chronic obstructive pulmonary disease by
PT comparing the expression level of a marker gene in a biological sample
PT from a subject with the expression level of the gene in a sample from a
PT healthy subject.
XX
XX Example 11; SEQ ID NO 747; 241pp; English.

The present invention describes a method of testing for bronchial asthma or chronic obstructive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy subject, and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13. Also described: (1) a reagent (I) for testing for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent to treat bronchial asthma or chronic obstructive pulmonary disease; (3) an animal model for bronchial asthma or chronic obstructive pulmonary disease; (4) an inducer that induces bronchial asthma in a mouse; (5) a method for producing an animal model for bronchial asthma or chronic obstructive pulmonary disease; (6) a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease, comprising the compound, a marker gene or an antisense nucleic acid corresponding to a portion of the marker gene, a ribozyme, a polynucleotide that suppresses the expression of the gene through an RNAi effect or an antibody recognising a protein encoded by a marker gene; and (7) a DNA chip for testing for bronchial asthma or a chronic obstructive pulmonary disease, on which a probe has been immobilised to assay a marker gene. (I) has respiratory and antiasthmatic activities, and can be used in gene therapy. The method is useful for testing for or screening for a therapeutic agent for bronchial asthma or chronic obstructive pulmonary disease. The present sequence is used in the exemplification of the present invention.

XX Claim 6; SEQ ID NO 234; 237pp; English.

XX

XX This invention relates to the novel association of protein sequences (and

CC the genes which encode them) to the NF-kappaB pathway. The invention may

CC be useful for the production of compounds with an antiinflammatory,

CC cytostatic, hepatotropic, virucide, antiarthritic, antirheumatic,

CC gastrointestinal-Gen, antiasthmatic, antiarteriosclerotic,

CC immunomodulator, cerebroprotective, vasotropic, immunosuppressive or

CC vulnary activity or for gene therapy. The proteins and nucleotides are

CC useful for diagnosing, preventing, treating, or ameliorating conditions

CC or diseases associated with the NF-kappaB pathway. The condition is an

CC immune disorder, an inflammatory disorder, an inflammatory disorder

CC related to aberrant NF-kappaB regulation, cancer, aberrant apoptosis,

CC hepatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM

CC syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic

CC ectodermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1,

CC hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell

CC survival, evasion of immune responses, rheumatoid arthritis, inflammatory

CC bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick

CC syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper

CC immune activity, disorders related to aberrant acute phase responses,

CC hypercongenital conditions, birth defects, necrotic lesions, wounds,

CC organ transplant rejection, conditions related to organ transplant

CC rejection, disorders related to aberrant signal transduction,

CC proliferating disorders, cancers and HIV propagation in cells infected

CC with other viruses. The present sequence is that of a human protein which

CC is subject to the novel association with the NF-kappaB pathway of the

CC invention. Note: This sequence does not appear in the specification but

CC was obtained by the indexer from Genbank.

PT Identifying an agent that modulates the function of an apoptosis-
 PT associated polypeptide, useful for diagnosing or treating e.g. cancer,
 PT comprises comparing the binding of the polypeptide to the candidate agent
 PT and to a control agent.

PS Claim 1; SEQ ID NO 2; 304pp; English.

XX This invention relates to novel agents that modulates the function of
 CC human apoptosis-associated proteins specified within the specification.
 CC Specifically, it refers to a method for the identification of target
 CC genes whose expression is correlated with an early stage in the
 CC regulation of apoptosis. The present invention describes a method of
 CC contacting either candidate agents or control agents to the target genes
 CC and assessing the difference of binding and inhibitory activity, where
 CC the candidate agent is selected from a low molecular weight organic
 CC molecule, an antibody or fragment thereof, an antisense oligonucleotide,
 CC a small inhibitory dsRNA, or a ribozyme. As such, the compositions and
 CC methods are useful for diagnosing and treating diseases or conditions
 CC associated with abnormal apoptosis in mammalian tissue, such as cancer,
 CC inflammation, autoimmune or neurodegenerative disorders. Accordingly,
 CC they exhibit cytostatic, antiinflammatory, immunosuppressive and
 CC neuroprotective activities. These may also be used for drug screening
 CC purposes and in gene therapy. This polypeptide sequence is a human target
 CC protein, an enzyme associated with the regulation of apoptosis whose
 CC expression is modulated by novel agents of the invention.

XX The invention relates to a mammalian cell receptor, useful in the
 CC treatment of cancer, which binds to tumour associated lipids and induces
 CC energy or apoptosis in the T cells and antigen presenting cells (APCs).
 CC Also included are a mammalian cell useful in the treatment of cancer
 CC where the receptor which binds tumour associated lipids and induces
 CC cellular inactivation or death is deleted or functionally deactivated,
 CC producing (M1) a tumouricidal immunocyte population in vivo in a mammal
 CC (by allowing tumour associated lipids to contact immunocytes in which
 CC receptors for immunosuppressive fatty acids, ceramides, glycolipids,
 CC sphingolipids, glycosphingolipids, phosphosphingolipids, gangliosides,
 CC sialylated glycans, lipopeptides and proteoglycolipids are inactivated or
 CC deleted), a construct useful in the treatment of cancer comprising a
 CC superantigen (SAG) nucleotide inserted into a virus, a mammalian T cell
 CC useful in the treatment of cancer (where an adaptor protein which
 CC inhibits T cell activation by tumour associated antigens is deleted or
 CC functionally deactivated), a composition useful in the treatment of
 CC cancer (comprising a lipid raft conjugated to a superantigen), producing
 CC (M2) a tumouricidal immunocyte population ex vivo in a mammal (by
 CC allowing tumour associated lipids to contact immunocytes, in which
 CC receptors for the lipids are inactivated or deleted to produce a
 CC tumouricidal immunocyte population, and administering the tumouricidal
 CC activated immunocytes to the host), producing (M3) a tumouricidal APC
 CC population ex vivo in a mammal (by allowing a tumour associated lipid to

CC contact APCs, in which receptors for the tumour associated lipids are
 CC inactivated or deleted to produce a tumouricidally activated population,
 CC and administering APCs to the host), producing a tumouricidal T cell
 CC population ex vivo in a mammal) by allowing a tumour associated lipids to
 CC contact T cells, in which adaptor proteins, which inhibit T cell
 CC activation by tumour associated antigens, are deleted or functionally
 CC deactivated to produce a tumouricidal population of T cells, and
 CC administering the tumouricidally activated T cells to the host, or
 CC allowing a superantigen-lipid raft to contact T cells ex vivo, and
 CC administering the tumouricidally activated T cells to the host), treating
 CC (M5) cancer in a mammal (by administering a lipid binding molecule which
 CC binds immunosuppressive tumour associated lipids in vivo), producing (M6)
 CC a tumouricidal T cell population in vivo in a mammal (by allowing a
 CC tumour associated antigen to contact immunocytes in which adaptor
 CC proteins which inhibit T cell activation by tumour associated antigens
 CC are deleted or functionally deactivated) and producing (M7) a
 CC tumouricidal T cell population ex vivo in a mammal comprising allowing a
 CC superantigen-lipid raft conjugate to contact immunocytes in vivo. The
 CC receptors, methods and compositions are useful for treating cancers and
 CC tumours. Bacterial superantigens are co-administered or administered as
 CC fusion constructs with anti-tumour proteins or motifs. The present
 CC sequence represents an anti-tumour protein which is co-administered with
 CC or incorporated into a fusion construct with a superantigen. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format from the US patent
 CC office website at "seqdata.uspto.gov/sequence.html?DocID=20020177551"

XX New receptor in a mammalian cell that inhibits regular activation by
 PT receptors specific for lipid-based tumor associated antigens, useful for
 PT treating a neoplastic disease or tumor, and infectious diseases.

PS Example 3; SEQ ID NO 124; 151pp; English.
 XX The invention describes a receptor in a mammalian cell that inhibits
 CC regular activation by receptors specific for lipid-based tumour
 CC associated antigen. The receptor has cytostatic and antimicrobial
 CC properties and is suitable for use in gene therapy. The receptors,
 CC methods and compositions are useful for treating a neoplastic disease or
 CC tumour (cancer), and infectious diseases. This sequence represents iNOS
 CC polypeptide, a cell surface moiety, the DNA of which can be transfected
 CC into a cell with superantigen DNA to generate antitumour immunity.

XX New isolated polynucleotide encoding a variant of a corresponding wild-
 PT type nitric oxide synthase, useful for reducing the restenotic response
 PT after angioplasty, or for inhibiting the development or onset of
 PT premature labor.

XX Disclosure; SEQ ID NO 5; 35pp; English.

XX The invention relates to an isolated polynucleotide encoding a variant of
 CC a corresponding wild-type nitric oxide synthase (NOS). The variant has
 CC the tryptophan in the alpha 3 helix substituted by tyrosine or
 CC phenylalanine. Also included are a nucleic acid construct comprising the
 CC nucleotide sequence that encodes a variant of a corresponding wild-type
 CC nitric oxide synthase and a promoter operably linked to the encoding
 CC sequence of the variant and a transformed cell comprising the construct,
 CC where the cell expresses the nitric oxide synthase variant. The variant
 CC has an in vitro enzymatic activity that is greater than the in vitro
 CC enzymatic activity of the corresponding wild-type nitric oxide synthase.
 CC The variant can preferably be of a corresponding wild-type endothelial
 CC nitric oxide synthase (eNOS), neuronal nitric oxide synthase (nNOS), or

CC inducible nitric oxide synthase (iNOS). The polynucleotides are useful
 CC for reducing the restenotic response after angioplasty, or related
 CC interventional procedures, or to enhance the vasodilation response in
 CC treating angina, for anticancer therapy to promote cell death, and for
 CC inhibiting the development or onset of premature labour. The
 CC polynucleotides are useful to achieve or augment expression of NOS
 CC variant proteins or polypeptides in vivo to increase NOS production in
 CC target tissue, tumour tissue, tissue of the nervous system, including
 CC brain, penis (e.g. in erectile dysfunction) and uterine tissue, and lung
 CC tissue. NOS is useful for maintaining vascular tone and regulating
 CC regional blood flow. The present sequence is wild-type mouse iNOS.

XX Testing for bronchial asthma or chronic obstructive pulmonary disease by
 PT comparing the expression level of a marker gene in a biological sample
 PT from a subject with the expression level of the gene in a sample from a
 PT healthy subject.

XX PS Claim 16; SEQ ID NO 1464; 241pp; English.

XX The present invention describes a method of testing for bronchial asthma
 CC or chronic obstructive pulmonary disease. The method comprises
 CC determining the expression level of a marker gene in a biological sample
 CC from a subject, comparing the expression level determined with the
 CC expression level of the marker gene in a biological sample from a healthy
 CC subject, and judging whether the subject has bronchial asthma or chronic
 CC obstructive pulmonary disease. The marker gene comprises: (a) a group of
 CC genes (S1) whose expression levels increase when respiratory epithelial
 CC cells are stimulated with interleukin-13; or (b) a group of genes (S2)
 CC whose expression levels decrease when respiratory epithelial cells are
 CC stimulated with interleukin-13. Also described: (1) a reagent (1) for
 CC testing for bronchial asthma or chronic obstructive pulmonary disease;

CC (2) a kit for screening for a candidate compound for a therapeutic agent
 CC to treat bronchial asthma or chronic obstructive pulmonary disease; (3)
 CC an animal model for bronchial asthma or chronic obstructive pulmonary
 CC disease; (4) an inducer that induces bronchial asthma in a mouse; (5) a
 CC method for producing an animal model for bronchial asthma or chronic
 CC obstructive pulmonary disease; (6) a therapeutic agent for bronchial
 CC asthma or chronic obstructive pulmonary disease, comprising the compound,
 CC a marker gene or an antisense nucleic acid corresponding to a portion of
 CC the marker gene, a ribozyme, a polynucleotide that suppresses the
 CC expression of the gene through an RNAi effect or an antibody recognising
 CC a protein encoded by a marker gene; and (7) a DNA chip for testing for
 CC bronchial asthma or a chronic obstructive pulmonary disease, on which a
 CC probe has been immobilised to assay a marker gene. (1) has respiratory
 CC and antiasthmatic activities, and can be used in gene therapy. The method
 CC is useful for testing for or screening for a therapeutic agent for
 CC bronchial asthma or chronic obstructive pulmonary disease. The present
 CC sequence is used in the exemplification of the present invention.

XX PT New composition for treating a tumor or neoplastic disease in a subject
 PT comprises conjugates comprising superantigen polypeptides or nucleic
 PT acids with other molecules that produce a tumoricidal response.

XX Example 3; SEQ ID NO 101; 125pp; English.

XX The invention relates to a composition for treating a tumor or neoplastic
 CC disease in a subject. Also described: (1) a mammalian cell comprising an

CC exogenous nucleic acid encoding a superantigen expressed in the cell,
 CC which cell also produces or expresses all alpha-anomers of
 CC monoglycosylceramide or diglycosylceramide, where expression of the
 CC superantigen and the mono- or diglycosylceramide is capable of eliciting
 CC an antitumor immune response in a mammal into which the cell is
 CC introduced; (2) treating a tumor or neoplastic disease in a subject; (3)
 CC preparing a population of immunotherapeutic T or natural killer T (NKT)
 CC cells useful to treat a tumor or neoplastic disease in a subject; (4) an
 CC apoptotic cell preparation or lysate useful for treating a tumor or
 CC neoplastic disease in a subject, comprising a cell population that has
 CC been transfected with naked DNA encoding a superantigen, and treated to
 CC undergo apoptosis or lysis; and (5) a cell that has ingested or been
 CC transfected with the above apoptotic preparation or lysate, thus,
 CC rendering the cell effective in presenting material expressed from
 CC transfecting nucleic acid or material ingested to the immune system of a
 CC mammal to elicit an anti-tumor immune response. The composition and
 CC methods are useful for treating tumors or neoplastic diseases. The
 CC present sequence represents a VEGF protein sequence, which is used in an
 CC example from the present invention. Note - The sequence data for this
 CC patent is not represented in the printed specification, but was obtained
 CC in electronic format directly from the USPTO web site.

XX Preventing/treating amyloid-related disease, especially Alzheimer's
 PT disease, comprises administering antigenic all-D peptide, eg. as vaccine,
 PT which elicits production of antibodies to prevent fibrillogenesis and
 PT associated cellular toxicity.

XX Disclosure; Page 10; 31pp; English.

XX The present sequence is that of an all-D peptide suitable for use for
 CC preparing vaccines for preventing or treating Alzheimer's disease and
 CC other amyloid related disorders in humans. It is based on a portion of
 CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
 CC inserting 1 or more amino acid residues, or by substituting 1 or more
 CC amino acid residues with other amino acid residues or non-amino acid
 CC fragments. Vaccines of the invention are produced using 'non-self'
 CC peptides synthesised from the unnatural D-configuration amino acids to
 CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 CC aggregated to be operative or immunogenic. They preferably interact with
 CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 CC GAG-binding site region, the amyloid-beta peptide, or their immunogenic
 CC fragments, protein conjugates, immunogenic derivative peptides and
 CC immunogenic peptidomimetics. Examples include all-D peptides
 CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
 CC related diseases may be localised amyloidosis, e.g. diabetes type II,
 CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
 CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 CC prion protein related disorders, or systemic amyloidosis associated with
 CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
 CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 CC amyloidosis found in long-term haemodialysis patients

XX New amyloid-targeting imaging agents useful for in vivo imaging amyloid
XX plaques and/or for the treatment of amyloidosis disorders.
XX
XX Claim 49; Page 21; 57pp; English.

The invention relates to an amyloid-targeting imaging agent comprising an
amyloid targeting moiety, a linker moiety and a labelling moiety. The
agent is of general formula A-t-(A₁n₁k) z-A₁l₁a₁b₁(t) where z = 0 - 1;
A-t = an amyloid targeting moiety; A₁n₁k = a linker moiety; and A₁l₁a₁b₁
= a labelling moiety. Also included are imaging amyloid deposition or
diagnosing an amyloid-related condition in a patient involving
administering (i) to the patient, and ultrasound imaging (ii) in the
patient to determine the presence of amyloid or amyloid-related condition
; and a kit for preparing a radiopharmaceutical preparation comprising
(i), a reducing agent, a buffering agent, a transchelating agent, and
instructions for the preparation and use of the radiopharmaceutical in
the imaging of amyloid or an amyloid-related condition. The agents are
used for imaging amyloid deposition and for diagnosing an amyloid related

CC condition e.g. Creutzfeldt-Jakob disease (CJD), kuru, transmissible
 CC cerebral amyloidosis (transmissible virus dementia), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, feline spongiform encephalopathy, non-transmissible
 CC cerebral amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC dialysis-related amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiopathy. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

 XX Prevention and/or treatment of an amyloid-related disease e.g.
 PT Alzheimer's disease, comprises use of all-D-amyloid-beta peptides.
 XX
 PS Claim 1; Page 59; 44pp; English.
 XX
 CC The invention relates to a method for prevention and/or treatment of an
 CC amyloid-related disease which comprises administration of an all-D -
 CC amyloid-beta peptide. The method is used for preventing and/or treating
 CC Alzheimer's and other amyloid related disease e.g. cerebral amyloid
 CC angiopathy; for altering serum levels of amyloid-beta in a mammal and
 CC favours the clearance of soluble amyloid-beta or fibril amyloid-beta from
 CC the mammal; and reducing or inhibiting the formation of plaques. It is
 CC also used for treating AA (reactive) amyloid diseases including
 CC inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic
 CC arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy,
 CC Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's
 CC disease. AA deposits are also produced as a result of chronic microbial
 CC infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
 CC ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
 CC Certain malignant neoplasms can also result in AA fibril amyloid deposits
 CC including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung
 CC and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The
 CC present sequence is an Abeta peptide used to illustrate the method of the
 CC invention

XX New amyloid-targeting imaging agent, useful for diagnosing an amyloid-
related condition, e.g. Creutzfeld-Jakob disease, bovine spongiform
encephalopathy, primary amyloidosis or Alzheimer's disease.

PS Disclosure; SEQ ID NO 1; 34pp; English.

XX The invention relates to an amyloid-targeting imaging agent. The imaging
agent comprises an amyloid targeting moiety (such as a peptide) joined to
a labeling moiety via a linking moiety, and is preferably able to cross
the blood-brain barrier. The invention also relates to a kit for
preparing a radiopharmaceutical preparation from the imaging agent of the
invention, a method for imaging amyloid deposition in a patient and a
method for diagnosing an amyloid-related condition in a patient. The
amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-
related conditions such as Creutzfeld-Jakob disease (CJD), Kuru,
transmissible cerebral amyloidosis (also known as transmissible virus
dementias), familial CJD, scrapie, transmissible mink encephalopathy,
bovine spongiform encephalopathy (BSE), inflammation-associated amyloid,
type II diabetes, primary amyloidosis, feline spongiform encephalopathy,
non-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-
mediated diseases, dialysis-related amyloidosis, light chain-related
amyloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a
patient. The agent does not exhibit excessive toxicity or irritation,
does not induce an allergic response, and permits an earlier diagnosis of
amyloid-related conditions, thereby allowing earlier treatment and hence
prevention of the undesirable effects of such disorders. Sequences
ADY37921-ADY37947 and ADY37949 represent peptides which may be used as
the amyloid-targeting moiety in an imaging agent of the invention.

 XX New amyloid-targeting imaging agent, useful for diagnosing an amyloid-
 XX related condition, e.g. Creutzfeld-Jakob disease, bovine spongiform
 XX encephalopathy, primary amyloidosis or Alzheimer's disease.
 XX Disclosure; SEQ ID NO 9; 34pp; English.
 XX The invention relates to an amyloid-targeting imaging agent. The imaging
 XX agent comprises an amyloid targeting moiety (such as a peptide) joined to
 XX a labeling moiety via a linking moiety, and is preferably able to cross
 XX the blood-brain barrier. The invention also relates to a kit for
 XX preparing a radiopharmaceutical preparation from the imaging agent of the
 XX invention, a method for imaging amyloid deposition in a patient and a
 XX method for diagnosing an amyloid-related condition in a patient. The
 XX amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-
 XX related conditions such as Creutzfeld-Jakob disease (CJD), Kuru,
 XX transmissible cerebral amyloidosis (also known as transmissible virus
 XX dementia), familial CJD, scrapie, transmissible mink encephalopathy,
 XX bovine spongiform encephalopathy (BSE), inflammation-associated amyloid,
 XX type II diabetes, primary amyloidosis, feline spongiform encephalopathy,
 XX non-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-
 XX mediated diseases, dialysis-related amyloidosis, light chain-related
 XX amyloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a
 XX patient. The agent does not exhibit excessive toxicity or irritation,
 XX does not induce an allergic response, and permits an earlier diagnosis of
 XX amyloid-related conditions, thereby allowing earlier treatment and hence
 XX prevention of the undesirable effects of such disorders. Sequences
 XX ADY37921-ADY37947 and ADY37949 represent peptides which may be used as
 XX the amyloid-targeting moiety in an imaging agent of the invention.

 XX New isolated polynucleotide and encoded polypeptides, useful in
 XX diagnostics, forensics, gene mapping, identification of mutations
 XX responsible for genetic disorders or other traits and to assess
 XX biodiversity.
 XX Claim 20; SEQ ID NO 56957; 103pp; English.
 XX The invention relates to isolated polynucleotide (I) and polypeptide (II)
 XX sequences. (I) is useful as hybridisation probes, polymerase chain
 XX reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
 XX and in recombinant production of (II). The polynucleotides are also used
 XX in diagnostics as expressed sequence tags for identifying expressed
 XX genes. (I) is useful in gene therapy techniques to restore normal
 XX activity of (II) or to treat disease states involving (II). (II) is
 XX useful for generating antibodies against it, detecting or quantitating a
 XX polypeptide in tissue, as molecular weight markers and as a food
 XX supplement. (II) and its binding partners are useful in medical imaging
 XX of sites expressing (II). (I) and (II) are useful for treating disorders
 XX involving aberrant protein expression or biological activity. The
 XX polypeptide and polynucleotide sequences have applications in
 XX diagnostics, forensics, gene mapping, identification of mutations
 XX responsible for genetic disorders or other traits to assess biodiversity
 XX and to produce other types of data and products dependent on DNA and
 XX amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
 XX amino acid sequences of the invention. Note: The sequence data for this
 XX patent did not appear in the printed specification, but was obtained in
 XX electronic format directly from WIPO at

XX PT Novel salivary Lutzomyia longipalpis polypeptide, useful for inhibiting
 XX PT symptom of Leishmania infection or preventing Leishmania infection in
 XX PT subjects.

XX PS Claim 2; SEQ ID NO 63; 145pp; English.

XX CC The present sequence is the protein sequence of LJM11, a Lutzomyia
 XX CC longipalpis (New World sand fly) salivary polypeptide. The invention
 XX CC provides substantially purified L. longipalpis polypeptides and the
 XX CC polynucleotides encoding them, as well as vectors, host cells, antibodies
 XX CC and pharmaceutical compositions comprising the polypeptides or
 XX CC polynucleotides. A claimed method for inducing an immune response to L
 XX CC longipalpis in a subject involves administering a L. longipalpis salivary
 XX CC polypeptide (or its variant or immunogenic fragment) or a polynucleotide
 XX CC encoding it. The immune response is a T-cell or B-cell response, and the
 XX CC subject is preferably a dog or a human. A claimed method for inhibiting a
 XX CC symptom of a Leishmania infection or preventing a Leishmania infection in
 XX CC a subject comprises administering a L. longipalpis salivary protein or
 XX CC polynucleotide. A claimed method of diagnosing Leishmania infection
 XX CC comprises contacting a solid substrate comprising at least 3, 6 or 10 L.

CC longipalpis salivary polypeptides with a sample from the subject and
 CC detecting binding of a component of the sample to at least one of the
 CC polypeptides.

 PT Modulators of amyloid aggregation - comprising, e.g. amyloidogenic
 protein coupled (in)directly to at least 1 modifying gp., useful in
 treatment of Alzheimer's disease.
 XX
 PS Claim 16; Page 91; 106pp; English.
 XX
 CC AAW02310-W02332 represent the peptide portions of the beta-amyloid
 modulator compounds of the invention. Beta-amyloid peptide is a 4
 kilodalton peptide that is the major protein component of amyloid
 plaques. Amyloid plaques are present both in the brain lesions, and in
 the walls of cerebral blood vessels in Alzheimer's disease patients. The
 amyloid modulators of the invention comprise an amyloidogenic protein or
 peptide (such as this sequence) coupled directly or indirectly to at
 least one modifying group. The modifying group is preferably a cyclic,
 heterocyclic, or polycyclic group, such as decaalin, a cholanyl group, a
 biotin containing group, or a fluorescein containing group. These
 compounds then modulate the aggregation of these sequences to natural
 amyloid proteins or peptides when contacted with the natural
 amyloidogenic proteins or peptides. The modulator compounds can be used
 in the treatment of disorders associated with amyloidosis, such as
 familial amyloid polyneuropathy, familial amyloid cardiomyopathy,
 isolated cardiac amyloidosis, systemic senile amyloidosis, scrapie,
 bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, adult-onset
 diabetes, insulinoma, familial Mediterranean fever, familial amyloid
 nephropathy with urticaria and deafness, hereditary cerebral haemorrhage
 and other types of amyloidosis. The modulators are also useful for the
 treatment of disorders associated with beta-amyloidosis, especially
 Alzheimer's disease

 PT New peptide(s) derived from beta-amyloid peptide that inhibit amyloid
 PT aggregation, and neurotoxicity, specifically for treatment and
 PT prevention of Alzheimer's disease.
 XX
 XX Example 12; Col 64; 52pp; English.
 XX
 CC The present invention describes beta-amyloid peptide (BAP) derivatives.
 CC The BAP derivatives inhibit aggregation of amyloidogenic proteins and
 CC peptides, specifically BAP, and their neurotoxicity, so are useful for
 CC treating and preventing any disease involving amyloidosis, specifically
 CC Alzheimer's disease but also Down's syndrome, familial amyloid
 CC polynuropathy or cardiomyopathy, bovine spongiform encephalopathy and
 CC Creutzfeldt-Jakob disease. The BAP derivatives are also used to diagnose
 CC these diseases, in vitro or in vivo, by detecting binding of BAP to
 CC labelled BAP derivatives. Some BAP derivatives inhibit BAP aggregation
 CC even when BAP is present in molar excess. The present sequence represents
 CC a BAP derivative

XX Preventing/treating amyloid-related disease, especially Alzheimer's
PT disease, comprises administering antigenic all-D peptide, eg. as vaccine,
PT which elicits production of antibodies to prevent fibrillogenesis and
PT associated cellular toxicity.
XX
XX Disclosure; Page 11; 31pp; English.
XX
XX The present sequence is that of an all-D peptide suitable for use for
XX preparing vaccines for preventing or treating Alzheimer's disease and
XX other amyloid related disorders in humans. It is based on a portion of
CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
XX inserting 1 or more amino acid residues, or by substituting 1 or more

CC amino acid residues with other amino acid residues or non-amino acid
CC fragments. Vaccines of the invention are produced using 'non-self'
CC peptides synthesised from the unnatural D-configuration amino acids to
CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
CC aggregated to be operative or immunogenic. They preferably interact with
CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
CC GAG-binding site region, the amyloid-beta peptide, or their immunogenic
CC fragments, protein conjugates, immunogenic derivative peptides and
CC immunogenic peptidomimetics. Examples include all-D peptides
CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
CC related diseases may be localised amyloidosis, e.g. diabetes type II,
CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
CC prion protein related disorders, or systemic amyloidosis associated with
CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
CC amyloidosis found in long-term haemodialysis patients. The present all-D
CC peptide was demonstrated to elicit antibody production in rabbits, and
CC provided greater anti-fibrillogenic activity than its all-L equivalent

 XX
 DR Amyloid modulator useful for treating a disorder associated with
 PT amyloidosis, comprises an amyloidogenic protein and/or a peptide fragment
 PT coupled to a modifying group.
 XX
 PS Example 12; Page 35; 41pp; English.
 XX
 CC The invention describes an amyloid modulator comprising an amyloidogenic
 CC protein and/or peptide fragment coupled to a modifying group so that the
 CC compound modulates the aggregation of natural amyloid proteins or
 CC peptides. The modulator is used for treating a disorder associated with
 CC amyloidosis e.g. familial amyloid polyneuropathy (Portuguese, Japanese
 CC and Swedish types), familial amyloid cardiomyopathy (Danish type),
 CC isolated cardiac amyloid, systemic senile amyloidosis, scrapie, bovine
 CC spongiform encephalopathy, Creutzfeldt-Jakob disease, adult onset
 CC diabetes, Gerstmann-Strausler-Scheinker syndrome, insulinoma, isolated
 CC atrial amyloidosis, idiopathic (primary) amyloidosis, myeloma or
 CC macroglobulinaemia-associated amyloidosis, primary localised cutaneous
 CC nodular amyloidosis associated with Sjogren's syndrome, reactive
 CC (secondary) amyloidosis, familial Mediterranean Fever and familial
 CC amyloid nephropathy with urticaria and deafness (Muckle-Wells syndrome),
 CC hereditary cerebral haemorrhage with amyloidosis of Icelandic type,
 CC amyloidosis associated with long term haemodialysis, hereditary non-
 CC neuropathic systemic amyloidosis (familial amyloid polyneuropathy III),
 CC familial amyloidosis of Finnish type, amyloidosis associated with
 CC medullary carcinoma of the thyroid, fibrinogen-associated hereditary
 CC renal amyloidosis and lysosome-associated hereditary systemic
 CC amyloidosis. The compound is capable of altering and inhibiting beta-
 CC amyloid protein (beta-AP) aggregation of natural amyloidogenic proteins
 CC or peptides when contacted with a molar excess amount of natural beta-APs
 CC relative to the modulator. This sequence represents a fragment of the
 CC long form of beta-amyloid used in the creation of an amyloid modulator

 CC Amyloid modulator compound useful for treatment of an amyloidogenic
 CC disease such as Alzheimer's disease comprises an aggregation core domain
 CC and a modifying group attached to it.
 PT
 XX Disclosure; Col 18; 54pp; English.
 PS
 CC The present invention describes an amyloid modulator compound (I)
 CC comprising an aggregation core domain and a modifying group attached to
 CC it. (I) has neurotropic, neuroprotective, immunosuppressive, antimicrobial,
 CC antidiabetic, antipyretic, dermatological, cardiovascular, nephrotropic
 CC and auditory activities, and can be used as a natural amyloid aggregation
 CC inhibitor and a neurotoxicity inhibitor of natural beta amyloid peptide
 CC (beta-AP). (I) are used in the manufacture of a medicament for the
 CC diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's
 CC disease and other clinical occurrences of beta amyloid deposition such as
 CC Down's syndrome individuals and in patients with hereditary cerebral
 CC haemorrhage with amyloidosis, and for treating a disorder associated with
 CC amyloidosis such as familial amyloid polyneuropathy. (I) reduces the
 CC toxicity of natural beta-AP aggregates to cultured neuronal cells. (I)
 CC not only reduces the formation of neurotoxic aggregates but also have the
 CC ability to reduce the neurotoxicity of performed A-beta fibrils. The
 CC present sequence represents a beta-AP peptide, which is used in the
 CC exemplification of the present invention

 Submitted (JUL-1996) to the EMBL/GenBank/DBJ databases.
 CC -1- CATALYTIC ACTIVITY: Cleavage of gelatin type I and collagen types
 IV, V, VII, X. Cleaves the collagen-like sequence Pro-Gln-Gly-
 Ile-Ala-Gly-Gln.
 CC -1- COFACTOR: Binds 4 calcium ions per subunit (By similarity).
 CC -1- COFACTOR: Binds 2 zinc ions per subunit (By similarity).
 CC -1- SUBUNIT: Ligand for integrin alpha-V/beta-3.
 CC -1- PTM: The propeptide is processed by MMP14 (MT-MMP1) and MMP16 (MT-
 MMP3) (By similarity).

CC -1- SIMILARITY: Belongs to the peptidase M10A family.
 CC -1- SIMILARITY: Contains 3 fibronectin type-II domains.
 CC -1- SIMILARITY: Contains 1 hemopexin-like domain.

CC -!- FUNCTION: Produces nitric oxide (NO) which is a messenger molecule
CC with diverse functions throughout the body.
CC -!- CATALYTIC ACTIVITY: L-arginine + n NADPH + m O(2) = citrulline +
CC nitric oxide + n NADP(+).
CC -!- COFACTOR: Heme.
CC -!- COFACTOR: FAD. Binds 1 mole of FAD.
CC -!- COFACTOR: FMN. Binds 1 mole of FMN.
CC -!- COFACTOR: Tetrahydrobiopterin (BH4). May stabilize the dimeric
CC form of the enzyme.
CC -!- ENZYME REGULATION: Not stimulated by calcium/calmodulin. Aspirin
CC inhibits expression and function of this enzyme and effects may be
CC exerted at the level of translational/posttranslational
CC modification and directly on the catalytic activity (By
CC similarity).
CC -!- SUBUNIT: Homodimer. Binds SLC9A3R1 (By similarity).
CC -!- TISSUE SPECIFICITY: In normal kidney, expressed primarily in the
CC medullary thick ascending limb, with minor amounts in the
CC medullary collecting duct and vasa recta bundle.
CC -!- INDUCTION: By interferon gamma and lipopolysaccharides (LPS).
CC -!- SIMILARITY: Belongs to the NOS family.
CC -!- SIMILARITY: Contains 1 flavodoxin-like domain.
CC -!- CAUTION: Ref.9 sequence was originally thought to originate from
CC human but appears to be from rat.

CC This Swiss-Prot entry is copyright. It is produced through a collaboration
CC between the Swiss Institute of Bioinformatics and the EMBL outstation -

CC the European Bioinformatics Institute. There are no restrictions on its
 CC use as long as its content is in no way modified and this statement is not
 CC removed.

CC -1- FUNCTION: Heat stable protein, that interacts with zyxin. May be a
CC component of a signal transduction pathway that mediates adhesion-
CC stimulated changes in gene expression.
CC -1- SUBUNIT: Monomer.
CC -1- SUBCELLULAR LOCATION: Associates with the actin cytoskeleton.
CC -1- TISSUE SPECIFICITY: Most prominent in tissues that are enriched in
CC smooth muscle cells, such as gizzard, stomach, and intestine.
CC Lower level in the heart, no expression in liver, skeletal muscle,
CC or brain.
CC -1- DEVELOPMENTAL STAGE: Expression levels increase dramatically
CC during smooth muscle maturation.
CC -1- DOMAIN: Glycine-rich repeats mediate the association with the
CC actin cytoskeleton (Probable).
CC -1- SIMILARITY: Contains 2 LIM zinc-binding domains.
CC This Swiss-Prot entry is copyright. It is produced through a collaboration
CC between the Swiss Institute of Bioinformatics and the EMBL Outstation -
CC the European Bioinformatics Institute. There are no restrictions on its
CC use as long as its content is in no way modified and this statement is not
CC removed.

 CC -!- FUNCTION: Heat stable protein, that interacts with zyxin. May be a component of a signal transduction pathway that mediates adhesion-stimulated changes in gene expression.
 CC -!- SUBUNIT: Monomer (By similarity).
 CC -!- SUBCELLULAR LOCATION: Associates with the actin cytoskeleton (By similarity).
 CC -!- DOMAIN: Glycine-rich repeats mediate the association with the actin cytoskeleton (Probable).
 CC -!- SIMILARITY: Contains 2 LIM zinc-binding domains.

 This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not removed.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 XX Preventing/treating amyloid-related disease, especially Alzheimer's
 PT disease, comprises administering antigenic all-D peptide, eg. as vaccine,
 PT which elicits production of antibodies to prevent fibrillogenesis and
 PT associated cellular toxicity.
 XX Disclosure; Page 11; 31pp; English.

CC The present sequence is that of an all-D peptide suitable for use in
 CC preparing vaccines for preventing or treating Alzheimer's disease and
 CC other amyloid related disorders in humans. It is based on a portion of
 CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
 CC inserting 1 or more amino acid residues, or by substituting 1 or more
 CC amino acid residues with other amino acid residues or non-amino acid
 CC fragments. Vaccines of the invention are produced using 'non-self'
 CC peptides synthesised from the unnatural D-configuration amino acids to
 CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 CC aggregated to be operative or immunogenic. They preferably interact with
 CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 CC GAG-binding site region, the amyloid-beta peptide, or their immunogenic
 CC fragments, protein conjugates, immunogenic derivative peptides and
 CC immunogenic peptidomimetics. Examples include all-D peptides
 CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
 CC related diseases may be localised amyloidosis, e.g. diabetes type II,
 CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
 CC prion protein related disorders, or systemic amyloidosis associated with
 CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
 CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 CC amyloidosis found in long-term haemodialysis patients

XX New amyloid-targeting imaging agents useful for in vivo imaging amyloid
 PT plaques and/or for the treatment of amyloidosis disorders.

XX Claim 49; Page 22; 57pp; English.

XX The invention relates to an amyloid-targeting imaging agent comprising an
 CC amyloid targeting moiety, a linker moiety and a labelling moiety. The
 CC agent is of general formula A-t-(A-l)n-k-z-A-l-a-b (I) where z = 0-1;
 CC A-t = an amyloid targeting moiety; A-l-n-k = a linker moiety; and A-l-a-b
 CC = a labelling moiety. Also included are imaging amyloid deposition or
 CC diagnosing an amyloid-related condition in a patient involving
 CC administering (I) to the patient, and ultrasound imaging (I) in the
 CC patient to determine the presence of amyloid or amyloid-related condition
 CC ; and a kit for preparing a radiopharmaceutical preparation comprising
 CC (I), a reducing agent, a buffering agent, a transchelating agent, and
 CC instructions for the preparation and use of the radiopharmaceutical in
 CC the imaging of amyloid or an amyloid-related condition. The agents are
 CC used for imaging amyloid deposition and for diagnosing an amyloid related
 CC condition e.g. Creutzfeldt-Jakob disease (CJD), kuru, transmissible
 CC cerebral amyloidosis (transmissible virus dementia), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, feline spongiform encephalopathy, non-transmissible
 CC cerebral amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC dialysis-related amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiopathy. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

XX CC Recombinant polypeptides produced using the coding sequences of mutant
 CC forms of amyloid precursor proteins comprising from the 5' to the 3' end
 CC a sequence encoding a marker and either (1) a sequence encoding the N-
 CC terminus of an amyloid precursor protein (APP) up to, but not including,
 CC the nucleotides encoding the beta amyloid protein (BAP) domain or (2) the
 CC BAP domain; or the two ligated together, can be used to detect drugs or
 CC compounds that inhibit/augment the activity of proteolytic enzymes which
 CC cleave APP to generate BAP fragments (deposition of which occurs in
 CC patients with Alzheimers disease and Down's syndrome). This is a fragment
 CC of amyloid precursor protein containing a mutation which is associated
 CC with diseases involving BAP deposition

 XX

CC The present sequence is that of an all-D peptide suitable for use in
 CC preparing vaccines for preventing or treating Alzheimer's disease and
 CC other amyloid related disorders in humans. It is based on a portion of
 CC amyloid-beta peptide (see AAB82622), and may be modified by removing or
 CC inserting 1 or more amino acid residues, or by substituting 1 or more
 CC amino acid residues with other amino acid residues or non-amino acid
 CC fragments. Vaccines of the invention are produced using 'non-self',
 CC peptides synthesised from the unnatural D-configuration amino acids to
 CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 CC aggregated to be operative or immunogenic. They preferably interact with
 CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 CC GAG-binding site region, the amyloid-beta peptide, or their immunogenic
 CC fragments, protein conjugates, immunogenic derivative peptides and
 CC immunogenic peptidomimetics. Examples include all-D peptides
 CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 CC in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
 CC related diseases may be localised amyloidosis, e.g. diabetes type II,
 CC Creutzfeldt-Jakob disease, scrapie, bovine spongiform encephalitis,
 CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
 CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 CC prion protein related disorders, or systemic amyloidosis associated with
 CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.

CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 CC amyloidosis found in long-term haemodialysis patients

 XX

CC The invention relates to an amyloid-targeting imaging agent comprising an
 CC amyloid targeting moiety, a linker moiety and a labelling moiety. The
 CC agent is of general formula A_t-(A_l)_n_k-z-A_l_a_b (1) where z = 0 - 1;
 CC A_t = an amyloid targeting moiety; A_l_n_k = a linker moiety; and A_l_a_b
 CC = a labelling moiety. Also included are imaging amyloid deposition or
 CC diagnosing an amyloid-related condition in a patient involving
 CC administering (1) to the patient, and ultrasound imaging (1) in the
 CC patient to determine the presence of amyloid or amyloid-related condition
 CC ; and a kit for preparing a radiopharmaceutical preparation comprising
 CC (1), a reducing agent, a buffering agent, a transchelating agent, and
 CC instructions for the preparation and use of the radiopharmaceutical in
 CC the imaging of amyloid or an amyloid-related condition. The agents are
 CC used for imaging amyloid deposition and for diagnosing an amyloid related
 CC condition e.g. Creutzfeldt-Jakob disease (CJD), Kuru, transmissible

CC cerebral amyloidoses (transmissible virus dementias), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, feline spongiform encephalopathy, non-transmissible
 CC dialysis-related amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC cerebral amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiodysplasia. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

XX New amyloid-targeting imaging agent, useful for diagnosing an amyloid-
 related condition, e.g. Creutzfeldt-Jakob disease, bovine spongiform
 encephalopathy, primary amyloidosis or Alzheimer's disease.

XX Disclosure; SEQ ID NO 19; 34pp; English.

XX The invention relates to an amyloid-targeting imaging agent. The imaging
 agent comprises an amyloid targeting moiety (such as a peptide) joined to
 a labeling moiety via a linking moiety, and is preferably able to cross
 the blood-brain barrier. The invention also relates to a kit for
 preparing a radiopharmaceutical preparation from the imaging agent of the
 invention, a method for imaging amyloid deposition in a patient and a
 method for diagnosing an amyloid-related condition in a patient. The
 amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-
 related conditions such as Creutzfeldt-Jakob disease (CJD), Kuru,
 transmissible cerebral amyloidosis (also known as transmissible virus
 dementias), familial CJD, scrapie, transmissible mink encephalopathy,
 bovine spongiform encephalopathy (BSE), inflammation-associated amyloid,

CC type II diabetes, primary amyloidosis, feline spongiform encephalopathy,
 CC non-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-
 mediated diseases, dialysis-related amyloidosis, light chain-related
 CC amyloidosis, cerebral amyloid angiodysplasia or Alzheimer's disease in a
 CC patient. The agent does not exhibit excessive toxicity or irritation,
 CC does not induce an allergic response, and permits an earlier diagnosis of
 CC amyloid-related conditions, thereby allowing earlier treatment and hence
 CC prevention of the undesirable effects of such disorders. Sequences
 CC ADY37921-ADY37947 and ADY37949 represent peptides which may be used as
 CC the amyloid-targeting moiety in an imaging agent of the invention.

 with senile dementia.

XX Claim 1; Page 2; 26pp; Chinese.

XX The invention relates to a human fusion antibody for preventing and
 treating senile dementia. The antibody recognises and binds the beta-
 amyloid peptide and the fibres generated by it. The human antibody Pc
 segment recognized by human immunocells are sequentially contained by its
 terminals from N to C. The fusion gene coding for the antibody is also
 disclosed. This sequence represents a beta-amyloid peptide recognised by
 the antibody.

XX Use of agents which bind beta-amyloid peptide - for diagnosis, prevention
PT and treatment of vascular damage caused by amyloid deposits, partic. in
PT haemorrhaging and Alzheimer's disease.
XX
XX Example 1; Fig 1; 52pp; English.
XX
XX To investigate the effects of beta-amyloid peptide (BAP) on tissue
CC plasminogen activator (t-PA) 3 synthetic peptides were used. One peptide
CC contained 42 amino acids and corresp. to the full length BAP (AAR95248).
CC The other 2 peptides (AAR95249 and 50) contained the 28 N-terminal
CC residues of the BAP found in Alzheimer's disease and hereditary cerebral
CC haemorrhage with amyloidosis-Dutch type (HCHWA-D), respectively. In an
CC assay to determine the effect of the peptides on t-PA activation, each
CC peptide (AAR95248, 49 and 50) gave 1st order rate constant of activation
CC (k(app)) values of 13.4, 13.9 and 14.5, respectively, compared to 1.7 and
CC 7.8 for null and fibrinogen controls. The results demonstrate that the
CC BAP are able to stimulate t-PA activity in vitro, which is significant in
CC that it provides a means for investigating and controlling the
CC pathogenesis of Alzheimer's disease, HCHWA-D and cerebral amyloid
CC angiopathy related cerebral haemorrhage

 XX
 CC Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.
 XX
 PS Disclosure; Page 514; 733pp; English.
 XX
 CC The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (III) and a
 CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or
 CC reduces the action of peptidases to increase length of activity (half
 CC life) and specificity as bonding to large molecules decreases
 CC intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the
 CC exemplification of the present invention

XX PT New transgenic fly expressing the Dutch mutation of the amyloid-beta
PT peptide 42, useful in identifying an agent for treating neurodegenerative
PT disease, e.g. Alzheimer's disease.

XX PS Claim 1; SEQ ID NO 1; 25pp; English.

XX CC The invention relates to a transgenic fly having a genome comprising a
CC DNA sequence encoding a polypeptide having the amyloid-beta peptide 42
CC containing the Dutch mutation of the 42-amino acid sequence. Further
CC disclosed is a method for identifying an agent active in
CC neurodegenerative disease. The transgenic fly is a transgenic Drosophila.
CC The transgenic fly comprises embryonic, larval, pupal or adult stage. The
CC DNA sequence is operatively linked to a tissue specific expression
CC control sequence or is fused to a sequence encoding a signal peptide,
CC which is the wingless (wg) signal peptide or the Argos (aos) signal
CC peptide. The method also comprises providing a transgenic fly and a
CC control wild-type fly, contacting the first transgenic fly and the
CC control wild-type fly with a candidate agent, and observing a difference
CC in phenotype between the first transgenic fly and the control fly, where
CC a difference in phenotype of the first transgenic fly relative to the
CC control fly indicates an agent active in neurodegenerative disease. The
CC transgenic fly is useful in identifying an agent active in
CC neurodegenerative disease for preparing a composition for treating
CC neurodegenerative disease, e.g. Alzheimer's disease. The current sequence
CC represents the human amyloid-beta peptide 42 containing the E22Q (Dutch
CC mutation).

XX PT New transgenic flies that express the human amyloid-beta 42 peptide
PT containing a pathogenic (e.g. Iowa, Dutch, Flemish, Italian or Arctic)
PT mutation, and optionally, a Tau protein, useful as models of
PT neurodegenerative disorders.

XX PS Claim 1; SEQ ID NO 2; 85pp; English.

XX CC This sequence represents a mutant amyloid-beta 42 (Abeta42) protein. This
CC sequence specifically represents Abeta42(Dutch). In this mutant protein
CC Glu22 is mutated to Gln. The mutant coding sequence is used in the
CC generation of a transgenic fly expressing a mutant Abeta42. The
CC transgenic fly comprises a genome comprising: a DNA sequence encoding a
CC polypeptide comprising the Abeta42 peptide containing the Iowa, Dutch,
CC Flemish or Italian mutation; or a first DNA sequence that encodes a human
CC Abeta42 peptide containing the Arctic mutation, and a second DNA sequence
CC that encodes a Tau. The transgenic fly is useful as a model of
CC neurodegenerative disorders, such as Alzheimer's disease. It may be used
CC for identifying genetic modifiers or for identifying therapeutic
CC compounds that may treat neurodegenerative disorders. The transgenic fly
CC is a Drosophila. The DNA sequence(s) is/are operatively linked to an

expression control sequence. The expression control sequence is a tissue specific expression control sequence. The DNA sequence is fused to a sequence encoding a signal peptide. Identifying an agent active in neurodegenerative disease comprises providing a first transgenic fly with an observable phenotype; contacting it with a candidate agent; and observing a phenotype of the first transgenic fly relative to the phenotype of a control fly, where an observable difference in the phenotype of the first transgenic fly relative to the control fly is indicative of an agent active in neurodegenerative disease. The transgenic fly is an adult fly or is in its larval stage. The expression control sequence is a tissue specific expression control sequence or comprises a UAS control element. The first DNA sequence is fused to a sequence encoding a signal peptide. The signal peptide is the wingless (wg) signal peptide or the Argos (aos) signal peptide. The observable phenotype is selected from rough eye, concave wing, a behavioral phenotype, and locomotor dysfunction. Alternatively, identifying an agent active in neurodegenerative disease comprises providing the above transgenic fly and a control wild-type fly; contacting the first transgenic fly and the control wild-type fly with a candidate agent; and observing a difference in phenotype between the transgenic fly and the control fly, where a difference in phenotype is indicative of an agent active in neurodegenerative disease.

XX New transgenic fly comprising a human amyloid-beta peptide 42 containing
PT a Dutch mutation and a Tau protein, useful for identifying agents to
PT treat neurodegenerative disorders.

XX Claim 1; SEQ ID NO 1; 26pp; English.

XX The present invention relates to a transgenic fly whose genome comprises
CC a first DNA sequence that encodes a human amyloid-beta (Abeta) peptide 42
CC of amyloid precursor protein (APP) containing the Dutch mutation
CC (AEA37375), and a second DNA sequence that encodes a human Tau protein.
CC The Dutch mutation, Glu22Gln, is associated with Alzheimer's disease. The
CC DNA sequence is also fused to a signal sequence. Also claimed is a method
CC of identifying an agent active in neurodegenerative disease. The
CC transgenic flies of the invention are useful for identifying genetic
CC modifiers and therapeutic compounds for treating neurodegenerative
CC disorders such as Alzheimer's disease, amyotrophic lateral sclerosis,
CC dementia, Guillain-Barre syndrome, lupus, brain and spinal tumors, Down's
CC syndrome, Parkinson's disease, Pick's disease, restless leg syndrome and
CC Sydenham's chorea.

XX Transgenic animal model for Alzheimer's disease - contains transgene
PT encoding amyloid protein under transcriptional control of synapsin gene
PT promoter.

XX Example; Page 55; 94pp; English.

XX There was no apparent reference to sequence ID numbers 20, 21 or 22 in
CC the specification. The specification describes a transgenic animal model
CC for Alzheimer's disease. A transgenic animal harbouring a transgene
CC coding for an amyloid protein under the control of a promoter is claimed.

CC The amyloid protein can be APP695, APP751 or APP770. The coding sequence
 CC may contain a mutation, including the hereditary cerebral haemorrhage
 CC with amyloidosis - Dutch type (HCHWA-DT) and familial Alzheimer's disease
 CC (FAD). Perhaps SQ IDs 20-22 corresp. to wt, HCHWA-DT and FAD? (Updated on

Screening for compounds which reduce beta-amyloid protein formation -
 using cells which express a construct encoding a marker and an amyloid
 precursor mutin derived from APP isoforms.

Disclosure; Fig 5A; 84pp; English.

CC This peptide sequence shows the region of amyloid precursor protein (APP)
 CC that includes a beta-amyloid protein (BAP) carrying a point mutation (BAP
 CC E22Q) found in patients with hereditary cerebral haemorrhage with
 CC amyloidosis of Dutch origin (HCHWA-D). In an attempt to engineer an APP
 CC non-cleavable substrate for secretase, an APP-reporter (APP-REP) protein
 CC that carries the E22Q mutation has been expressed in recombinant host
 CC cells. This resulted in the secretion of an N-terminal fragment
 CC indistinguishable from that of APP-REP 751 (see AAW26393-94). Non-
 CC cleavable APP substrates can be used to detect other putative abnormal

CC APP processing events. They can also be used to investigate cellular post
 CC -translational modifications to APP in order to determine the potential
 CC influence on normal secretase and abnormal BAP 'clipping' activities.

XX
XX Amyloid precursor protein fusion polypeptides - comprising APP fragment
XX and marker, useful for research and drug screening.
XX
XX Disclosure; Fig 5A; 84pp; English.
XX
XX The present sequence represents a beta-amyloid peptide (BAP) with a E22Q
XX mutation. Abnormal accumulation of extracellular BAP in plaques and
XX cerebrovascular deposits is characteristic in brains of individuals
XX suffering from Alzheimers disease and Downs syndrome. BAP is a poorly
XX soluble, self-aggregating protein which is derived from a larger amyloid
XX precursor protein (APP). APP is expressed as an integral membrane
XX protein, and is cleaved by secretase, between BAP 16Lys and 17Leu.
XX Cleavage at this site precludes amyloidogenesis and results in the
XX release of the amino-terminal APP fragment. The E22Q mutation in BAP is
XX found within the APP of patients with hereditary cerebral haemorrhage
XX with amyloidosis of Dutch origin, and may be due to an alteration in the
XX rate of BAP aggregation. APP can be used as a substrate for studying
XX abnormal proteolytic cleavage which results in the release of BAP, and

CC also to screen for drugs that will inhibit such cleavage

 XX PT New peptide compound useful for design of substances that enhance memory.
 XX PS Disclosure; Col 6; 30pp; English.

XX CC The present invention describes a novel peptide compound comprising Lys-
 CC His-Tyr-beta-alanine, which has a memory modulating effect. The peptide
 CC has nootropic activity. The peptide can be used for the development of
 CC topographic models useful to design and synthesise memory-enhancing and
 CC life-quality improving substances. The peptide compound restores the
 CC balance between excitatory and inhibitory systems in the brain, which is
 CC required for optimal acquisition and retention of learning and helps to
 CC correct defects in the balance that arise as a result of aging,
 CC infections and injury. The substances exert reyeberneticising effects on
 CC nervous system function and has more prolonged desired effects at lower
 CC doses than the peptide structures. The substances mimic the action of
 CC active peptides without having a peptide structure and do not subject to
 CC degradation of peptide-splitting enzymes in the gut or other tissues. The
 CC present sequence represents a human amyloid beta protein (beta-A4)
 CC peptide which is not amnesic, and is used in the exemplification of the
 CC present invention

 XX Novel peptide for inhibiting fibrillogenesis, and for screening
 PT fibrillogenesis inhibitors, has beta-strand with one face having hydrogen
 PT bonds and other face blocking propagation of hydrogen bonding between
 PT beta-strands.
 XX Disclosure; Page 7; 151pp; English.
 XX The invention relates to a peptide (I) inhibiting fibrillogenesis, that
 CC comprises a beta-strand with two faces, where the first face has hydrogen
 CC bonds, and the second face blocks or disrupts propagation of hydrogen
 CC bonding between beta-strands needed to form fibrils. (I) is useful for
 CC inhibiting fibrillogenesis, for detecting fibrils in a subject and for
 CC screening candidate fibrillogenesis inhibitors. A pharmaceutical
 CC composition comprising (I) is useful for inhibiting or disassembling
 CC fibrils associated with pathological states such as Alzheimer's disease,
 CC Down's syndrome, Dutch-type hereditary cerebral haemorrhage amyloidosis,
 CC reactive amyloidosis, familial Mediterranean fever, familial amyloid
 CC nephropathy with utricaria and deafness, Muckle-Wells syndrome,
 CC idiopathic myeloma, macroglobulinemia-associated myeloma, familial
 CC amyloid polynuropathy, familial amyloid cardiomyopathy, isolated cardiac
 CC amyloid, systemic senile amyloidosis, adult onset diabetes, insulinoma,
 CC isolated atrial amyloid, medullary carcinoma of the thyroid, familial
 CC amyloidosis, hereditary cerebral haemorrhage with amyloidosis, familial
 CC amyloidotic polynuropathy, scrapie, Creutzfeldt-Jakob disease, Gerstmann
 CC -Strausler-Scheinker syndrome, bovine spongiform encephalitis, prion-
 CC mediated diseases, or Huntington's disease. (I) is useful for treating
 CC disease associated with fibrillogenesis or for creating and/or diagnosing
 CC a subject which is a mammal, preferably human, having protein aggregation
 CC disease or protein misfolding disease. The composition is useful in both
 CC preventive and curative therapies of fibril based pathologies mentioned
 CC above. The present sequence represents a peptide which can comprise
 CC consecutive N-methylation, but is a weak inhibitor of Abeta
 CC fibrillogenesis

XX Controlling self-assembly of peptide-based structures (e.g. nanotubes)
 PT comprises providing a controlled environment and placing segments of beta
 FT -amyloids in the controlled environment to generate a self-assembling
 PT structure.

XX Disclosure; Page 10; 46pp; English.

XX The present invention describes a method (M1) for controlling self-
 CC assembly of self-assembling peptide-based structures by providing a
 CC controlled environment and placing segments of beta-amyloids in the
 CC controlled environment to generate a self-assembling structure. Also
 CC described: (1) a method (M1a) for controlling self-assembly of peptide-
 CC based structures comprising providing a controlled environment adapted to
 CC redirect a self-assembly process, and generating a self-assembling
 CC peptide-based structure by placing the self-assembling peptide in the
 CC controlled environment; and (2) a self-assembling peptide-based structure
 CC comprising beta-amyloid segments, optionally with a conservative amino
 CC acid substitution; and hydrogen bonds formed between the segments of the
 CC beta-amyloid. The method is useful in controlling the self-assembly of
 CC self-assembling peptide-based structures. The self-assembling peptide
 CC structures may be used in generating devices at a molecular level to
 CC permit molecular-level probing. The present sequence represents a human
 CC beta-amyloid 16-22 amino acid sequence, which is used in the
 CC exemplification of the present invention.

XX New self-aggregating peptide useful for treating amyloid-associated
 PT diseases e.g., Alzheimer's disease, Parkinson's disease, hereditary
 PT Icelandic syndrome, multiple myeloma, medullary carcinoma.

XX Example 21; Fig 1; 138pp; English.

XX This invention relates to novel self-aggregating peptides that can be
 CC used for the diagnosis and treatment of amyloid-associated diseases.
 CC Specifically, it refers to peptides, and antibodies directed
 CC thereagainst, which can prevent or reduce fibril formation and
 CC disaggregate formed aggregates by competitive destabilisation.
 CC Accordingly, these compositions can be used directly to inhibit the
 CC production of islet amyloid polypeptides (IAPPs) and for the inhibition
 CC of amyloidosis. As such they are useful for treating a variety of
 CC unrelated pathological conditions including type-II diabetes mellitus,
 CC Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome,
 CC multiple myeloma, medullary carcinoma, aortic medical carcinoma.
 CC Additionally, they can be described as exhibiting activities such as
 CC antidiabetic, nootropic, neuroprotective and antiparkinsonian. This
 CC peptide sequence is a human medin peptide fragment (also known as milk
 CC fat globule-EGF factor 8 protein, which is the main constituent of aortic
 CC medial amyloid deposits). This peptide sequence is a human calcitonin-
 CC derived peptide fragment 2 used to show self-assembly and hydrophobicity
 CC of amyloid proteins in an exemplification of the invention.

XX Tubular of spherical nanostructure for e.g. use in obtaining information
 PT from nanoscale environment, is composed of peptides including aromatic or
 PT polyaromatic amino acids.

XX Example 1; Fig 9a; 94pp; English.

XX The present invention describes a tubular of spherical nanostructure
 CC composed of peptides including no more than 4 aromatic or polyaromatic
 CC amino acids. Also described: (1) a method of generating a tubular or
 CC spherical nanostructure; (2) a field emitter device; (3) a device for
 CC obtaining information from a nanoscale environment; (4) an apparatus for
 CC electron emission lithography; (5) a memory cell; (6) a mechanical
 CC transmission device; (7) an electronic inverter having a first switching
 CC device and a second switching device; (8) a composition; (9) a heat
 CC transfer device; (10) a method of emitting electrons; and (11) a method
 CC of obtaining information from a nanoscale environment. The nanostructure
 CC can be used in a field emitter device, a device for obtaining information
 CC from a nanoscale environment, an apparatus for electron emission
 CC lithography, a memory cell, a mechanical transmission device, an
 CC electronic inverter, and a matrix-containing composition. It is used in
 CC emitting electrons, in obtaining information from a nanoscale
 CC environment, in recording binary information, in transmitting mechanical
 CC motion, grabbing and/or in manipulating nanoscale objects, and
 CC transferring heat. The nanostructure is highly robust under extreme pH
 CC and temperatures. It enhances electromagnetic fields near ultra small
 CC metal objects. The use of nanostructure as gates in electronic device
 CC allows operation at low gate voltage and enables the switching of several
 CC individual devices on the same substrates. The present sequence
 CC represents a beta-amyloid central aromatic core structure amino acid
 CC sequence, which is used in an example from the present invention for the
 CC nanotube self-assembly of Alzheimer's beta-amyloid core recognition
 CC element.

XX New inhibitors of fibrillogenesis proteins or peptides - used for
PT preventing, treating or detecting amyloidosis disorders such as
PT Alzheimer's disease.

XX Disclosure; Fig 1A; 63pp; English.

XX A method has been developed for the prevention or treatment of a disorder
CC or disease associated with the formation of amyloid or amyloid-like
CC deposits, involving the abnormal folding of a protein or peptide. The
CC method involves administering an inhibitory peptide which prevents the
CC abnormal folding or which dissolves existing amyloid or amyloid-like
CC deposits, where the peptide comprises a sequence of 3-15 amino acid
CC residues and has a hydrophobic cluster of at least 3 amino acids, where
CC at least one of the 3 amino acids is a beta-sheet blocking amino acid
CC residue selected from Pro, Gly, Asn and His. The present sequence
CC represents an amyloidogenic sequence, amyloid beta-peptide, which is
CC involved in the formation of several amyloid deposits. The inhibitory
CC peptide is capable of associating with a structural determinant on the
CC protein or peptide to structurally block and inhibit the abnormal folding
CC into amyloid or amyloid-like deposits. The method can be used for
CC preventing, treating or detecting e.g. Alzheimer's dementia or disease,
CC Down's syndrome, other amyloidosis disorders, human prion diseases such
CC as Kuru, Creutzfeldt-Jakob disease, Gerstmann-Straussler-Scheinker
CC Syndrome, prion associated human neurodegenerative diseases or animal
CC prion diseases such as scrapie, spongiform encephalopathy, transmissible
CC mink encephalopathy and chronic wasting disease of mule deer and elk

XX PT precursor protein processing activity and alpha-secretase activity, for
XX PT identifying modulators useful in treating Alzheimer's disease.
XX PS Claim 10; Page 163; 187pp; English.
XX CC The patent discloses human aspartyl protease 1 (hu-Asp1) or modified Asp1
XX CC proteins which lack transmembrane domain or amino terminal domain or
XX CC cytoplasmic domain and retains alpha-secretase activity and amyloid
XX CC protein precursor (APP) processing activity. The proteins of the
XX CC invention are useful for assaying hu-Asp1 alpha-secretase activity, which
XX CC in turn is useful for identifying modulators of hu-Asp1 alpha-secretase
XX CC activity, where modulators that increase hu-Asp1 alpha-secretase activity
XX CC are useful for treating Alzheimer's disease (AD) which causes progressive
XX CC dementia with consequent formation of amyloid plaques, neurofibrillary
XX CC tangles, gliosis and neuronal loss. Hu-Asp1 protease substrate is useful
XX CC for assaying hu-Asp1 proteolytic activity, by contacting hu-Asp1 protein
XX CC with the substrate under acidic conditions and determining the level of
XX CC hu-Asp1 proteolytic activity. The present sequence is human amyloid
XX CC precursor protein (APP) substrate alpha-secretase peptide which is used
XX CC for determining the enzymatic activity of Asp-1 protein lacking
XX CC transmembrane domain (TM) and containing a (His)6 tag

 XX New inhibitory peptide, useful for preparing a composition for
 PT diagnosing, preventing or treating disorders associated with amyloid-like
 PT fibril deposits, e.g. Alzheimer's disease, or prion related
 PT encephalopathies.
 XX
 XX Example 1; Fig 1A; 52pp; English.
 PS
 XX The invention relates to inhibitory peptide comprising a portion of at
 CC least three amino acid residues and a sequence predicted not to adopt a
 CC beta-sheet structure that associates with a hydrophobic beta-sheet

CC cluster on a protein or peptide involved in the abnormal folding into a
 CC beta-sheet structure, to structurally block the abnormal folding of the
 CC protein or peptide. The inhibitory peptide is useful for preparing a
 CC composition for preventing, treating or detecting disorders or disease and
 CC associated with amyloid-like fibril deposits e.g. Alzheimer's disease and
 CC prion related encephalopathies. The invention is also useful in gene
 CC therapy. The present sequence is beta-amyloid peptide. This peptide is
 CC involved in the formation of several amyloid deposits

 XX New isolated mammalian anti-amyloid antibodies useful for treating
 PT amyloid-associated disorders, such as Alzheimer's disease, cancer,
 PT allergies, autoimmune disease, Parkinson's disease, multiple sclerosis,
 PT migraine and dementia.
 XX Example 4; SEQ ID NO 125; 306pp; English.

XX The invention relates to at least one isolated mammalian amyloid antibody
 CC comprising at least one variable region comprising at least one heavy
 CC chain and at least one light chain. Of a fully defined sequence of SEQ ID
 CC NOS: 48, 49, 59, 60, 69, 70, 79 and 80, respectively. Also described are:
 CC (i) at least one isolated mammalian amyloid antibody that binds to the
 CC same region of an amyloid polypeptide as an antibody comprising at least
 CC one heavy chain or light chain complementarity determining region (CDR)
 CC having the amino acid sequence of at least one of SEQ ID NO: 73-78, (ii)
 CC at least one isolated mammalian amyloid antibody, comprising at least one
 CC human CDR, where the antibody specifically binds at least one epitope
 CC selected from amino acids 2-7, 3-8, 33-42, or 34-40 of a fully defined
 CC sequence of 42 amino acids (SEQ ID NO: 50), (iii) an isolated nucleic
 CC acid encoding at least one of any of the isolated mammalian amyloid
 CC antibodies mentioned and having at least one human CDR of a fully defined
 CC sequence of SEQ ID NO: 51, 52, 61, 62, 71, 72, 81 and 82, (iv) an
 CC isolated nucleic acid vector comprising an isolated nucleic acid encoding
 CC an amyloid antibody, (v) a prokaryotic or eukaryotic host cell comprising
 CC an isolated nucleic acid encoding an amyloid antibody, (vi) a method of
 CC producing at least one amyloid antibody, (vii) a composition comprising
 CC at least one of any of the isolated mammalian amyloid antibodies
 CC mentioned, and at least one pharmaceutical carrier or diluent, (viii) an
 CC anti-idiotypic antibody or fragment that specifically binds at least one
 CC of the amyloid antibodies mentioned, (ix) a method of diagnosing or
 CC treating an amyloid related condition in a cell, tissue, organ or animal,
 CC comprising contacting or administering a composition comprising at least
 CC one of the antibodies mentioned, with, or to, the cell, tissue, organ or
 CC animal, (x) a medical device comprising at least one amyloid antibody
 CC mentioned, where the device is suitable for contacting or administering
 CC at least one amyloid antibody, (xi) an article of manufacture for human
 CC pharmaceutical or diagnostic use, comprising packaging material and a
 CC container comprising a solution or a lyophilized form of at least one of
 CC the amyloid antibodies mentioned, and (xii) a method of producing at
 CC least one of the isolated mammalian amyloid antibodies, comprising
 CC providing a host cell or transgenic animal or transgenic plant or plant
 CC cell capable of expressing the antibody in recoverable amounts. The
 CC methods and compositions of the present invention are useful for
 CC producing therapeutic compositions and devices for treating amyloid-
 CC associated disorders, such as Alzheimer's disease, cancer, allergies,
 CC autoimmune disease, Parkinson's disease, AIDS, multiple sclerosis,
 CC migraine, dementia and infections. This sequence represents a peptide
 CC from human beta-amyloid probed with anti-beta-amyloid IgG antibodies.

XX Conjugating peptide immunogen, by derivatizing functional groups of
 PT protein or polypeptide carrier, reacting reactive group of amino acid
 PT residue of peptide immunogen with carrier having functional groups, to
 PT produce conjugate.

XX Example 10; SEQ ID NO 51; 155pp; English.

XX The present invention relates to producing an immunogenic conjugate of a
 CC peptide immunogen with a protein or polypeptide carrier. Specifically,
 CC conjugating (M1) the peptide immunogen through a reactive group of an
 CC amino acid residue to a protein/polypeptide carrier (PC) having
 CC functional groups, by derivatizing functional groups of PC, reacting
 CC derivatized PC with a peptide immunogen to produce the conjugate,
 CC reacting the conjugate with a capping reagent to produce the conjugate,
 CC unreacted functional groups, so that the conjugate elicits immune
 CC responses against peptide immunogen. In (M1), the carrier is chosen from
 CC for example, human serum albumin, keyhole limpet hemocyanin (KLH), and
 CC immunoglobulin molecules, hepatitis B surface antigen (HBsAg19.23), and
 CC cholera toxin. The carrier contains a T-cell epitope. The carrier is a
 CC bacterial or viral protein such as influenza hemagglutinin, and malaria
 CC circumsporozoite (CS) protein. Preferably, the carrier is C.pneumoniae ORF
 CC T858. The peptide immunogen can also be an antigen from a malignant
 CC tumor. Antibacterial; Virucide; Fungicide; Antiparasitic; Neuroprotective
 CC ; Nootropic; Cytostatic.Immunotherapy. The method is useful for inducing
 CC an immune response against pathogens, in a mammalian subject, and
 CC Alzheimer's disease and cancer. The present sequence is a Abeta16-22-C
 CC peptide.

XX Novel inhibitory peptides which inhibit and structurally block abnormal
 PT folding of protein into amyloid or amyloid-like deposit and into
 PT pathological beta-sheet rich conformation, useful for treating
 PT Alzheimer's disease.

XX Disclosure; Col 51-52; 51pp; English.

CC The invention describes an isolated inhibitory peptide (I) which
 CC interacts with a hydrophobic beta-sheet forming cluster of amino acid
 CC residues on a protein or peptide for amyloid or amyloid-like deposit
 CC formation, and inhibits or structurally blocks the abnormal folding of
 CC proteins and peptides into amyloid or amyloid-like deposits and into
 CC pathological beta-sheet rich conformation. (I) is useful for disorders or
 CC diseases associated with abnormal protein folding into amyloid or amyloid
 CC -like deposits or into pathological beta-sheet-rich precursors of such
 CC deposits, such as Alzheimer's disease, Down's syndrome, other amyloidosis
 CC disorders, human prion diseases, such as kuru, Creutzfeldt-Jakob disease
 CC (CJD), Gerstmann-Strausler-Scheinker syndrome (GSS), prion associated
 CC human neurodegenerative diseases as well as animal prion diseases such as
 CC scrapie, spongiform encephalopathy, transmissible mink encephalopathy and
 CC chronic wasting disease of mule deer and elk. (I) is also useful for
 CC detecting and diagnosing the presence or absence of amyloid or amyloid-
 CC like deposits in vivo and its precursors. This is the amino acid sequence
 CC of peptide associated with the inhibition of amyloid or amyloid like
 CC deposits

XX New inhibitory peptide, useful for preparing a composition for
 PT diagnosing, preventing or treating disorders associated with amyloid-like
 PT fibril deposits, e.g. Alzheimer's disease, or prion related
 PT encephalopathies.

XX Claim 1; Page 28; 52pp; English.

XX The invention relates to inhibitory peptide comprising a portion of at
 CC least three amino acid residues and a sequence predicted not to adopt a
 CC beta-sheet structure that associates with a hydrophobic beta-sheet
 CC cluster on a protein or peptide involved in the abnormal folding into a
 CC beta-sheet structure, to structurally block the abnormal folding of the
 CC protein or peptide. The inhibitory peptide is useful for preparing a
 CC composition for preventing, treating or detecting disorders or diseases
 CC associated with amyloid-like fibril deposits e.g. Alzheimer's disease and
 CC prion related encephalopathies. The invention is also useful in gene
 CC therapy. The present sequence is a peptide used in the invention

XX PT Conjugating peptide immunogen by reacting derivatized protein/polypeptide
 PT carrier with a reactive group of an amino acid of the peptide immunogen
 PT so that the peptide immunogen is conjugated to derivatized
 PT protein/polypeptide carrier.

XX PS Example 10; SEQ ID NO 45; 150pp; English.

XX CC The present invention relates to methods of producing an immunogenic
 CC conjugate of a peptide immunogen comprising Abeta peptide or fragments of
 CC Abeta or analogs with a protein/polypeptide carrier. Given is a method of
 CC conjugating a peptide immunogen, Abeta peptide, via a reactive group of a
 CC residue to a protein/polypeptide carrier. The method comprises reacting a
 CC derivatized protein/polypeptide carrier with a reactive group of an amino
 CC acid of the Abeta peptide. In conjugating a peptide immunogen, the
 CC carrier is selected from many substances such as human serum albumin,
 CC keyhole limpet hemocyanin (KLH), immunoglobulin molecules, thyroglobulin,
 CC and growth factors or hormones and preferably contains a T-cell epitope,
 CC or is a bacterial toxoid. The growth factor or hormone is selected from

CC IL-1, IL-2, gamma-interferon, IL-10, GM-CSF, MIP-1alpha, MIP-1beta, or
 CC RANTES. Described is a method of inducing an immune response in a
 CC mammalian subject by administering an amount of the immunogenic
 CC composition to the subject. The conjugate is useful in the manufacture of an
 CC a medicament for use in the treatment, prophylaxis, or amelioration of an
 CC amyloidogenic disease. The disease is Alzheimer's disease or Down's
 CC syndrome. It is also useful for treating viral infection or cancers. The
 CC present sequence is the A 16-23-C peptide immunogen, SEQ ID NO: 45.

XX PT Conjugating peptide immunogen by reacting derivatized protein/polypeptide
 PT carrier with a reactive group of an amino acid of the peptide immunogen
 PT so that the peptide immunogen is conjugated to derivatized
 PT protein/polypeptide carrier.

XX PS Example 10; SEQ ID NO 48; 150pp; English.

XX CC The present invention relates to methods of producing an immunogenic
 CC conjugate of a peptide immunogen comprising Abeta peptide or fragments of
 CC Abeta or analogs with a protein/polypeptide carrier. Given is a method of
 CC conjugating a peptide immunogen, Abeta peptide, via a reactive group of a
 CC residue to a protein/polypeptide carrier. The method comprises reacting a
 CC derivatized protein/polypeptide carrier with a reactive group of an amino
 CC acid of the Abeta peptide. In conjugating a peptide immunogen, the
 CC carrier is selected from many substances such as human serum albumin,
 CC keyhole limpet hemocyanin (KLH), immunoglobulin molecules, thyroglobulin,
 CC and growth factors or hormones and preferably contains a T-cell epitope,
 CC or is a bacterial toxoid. The growth factor or hormone is selected from
 CC IL-1, IL-2, gamma-interferon, IL-10, GM-CSF, MIP-1alpha, MIP-1beta, or
 CC RANTES. Described is a method of inducing an immune response in a
 CC mammalian subject by administering an amount of the immunogenic
 CC composition to the subject. The conjugate is useful in the manufacture of

CC a medicament for use in the treatment, prophylaxis, or amelioration of an
 CC amyloidogenic disease. The disease is Alzheimer's disease or Down's
 CC syndrome. It is also useful for treating viral infection or cancers. The
 CC present sequence is the C-A 16-23 peptide immunogen, SEQ ID NO: 48.

XX PT Conjugating peptide immunogen, by derivatizing functional groups of
 PT protein or polypeptide carrier, reacting reactive group of amino acid
 PT residue of peptide immunogen with carrier having functional groups, to
 PT produce conjugate.

XX PS Example 10; SEQ ID NO 45; 155pp; English.

XX CC The present invention relates to producing an immunogenic conjugate of a
 CC peptide immunogen with a protein or polypeptide carrier. Specifically,
 CC conjugating (M1) the peptide immunogen through a reactive group of an
 CC amino acid residue to a protein/polypeptide carrier (PC) having
 CC functional groups, by derivatizing functional groups of PC, reacting
 CC derivatized PC with a peptide immunogen to produce the conjugate,
 CC reacting the conjugate with a capping reagent to inactive free, reactive
 CC unreacted functional groups, so that the conjugate elicits immune
 CC responses against peptide immunogen. In (M1), the carrier is chosen from
 CC for example, human serum albumin, keyhole limpet hemocyanin (KLH), and
 CC immunoglobulin molecules, hepatitis B surface antigen (HBsAg), and
 CC cholera toxin. The carrier contains a T-cell epitope. The carrier is a
 CC bacterial or viral protein such as influenza hemagglutinin, and malaria
 CC circumsporozoite (CS) protein. Preferably, the carrier is C.pneumoniae ORF
 CC T858. The peptide immunogen can also be an antigen from a malignant
 CC tumor. Antibacterial; Virucide; Fungicide; Antiparasitic; Neuroprotective
 CC ; Nootropic; Cytostatic. Immunotherapy. The method is useful for inducing
 CC an immune response against pathogens, in a mammalian subject, and
 CC Alzheimer's disease and cancer. The present sequence is a Abeta16-23-C

CC peptide.

 CC -I- FUNCTION: Produces nitric oxide (NO) which is a messenger molecule
 CC with diverse functions throughout the body. In macrophages, NO
 CC mediates tumoricidal and bactericidal actions.
 CC -I- CATALYTIC ACTIVITY: L-arginine + n NADPH + m O(2) = citrulline +
 CC nitric oxide + n NADP(+).
 CC -I- COFACTOR: Heme.
 CC -I- COFACTOR: FAD. Binds 1 mole of FAD.
 CC -I- COFACTOR: FMN. Binds 1 mole of FMN.
 CC -I- COFACTOR: Tetrahydrobiopterin (BH4). May stabilize the dimeric
 CC form of the enzyme.
 CC -I- ENZYME REGULATION: Not stimulated by calcium/calmodulin. Aspirin
 CC inhibits expression and function of this enzyme and effects may be
 CC exerted at the level of translational/posttranslational
 CC modification and directly on the catalytic activity.
 CC -I- SUBUNIT: Homodimer. Binds SLC9A3R1 (By similarity).
 CC -I- TISSUE SPECIFICITY: Macrophages.
 CC -I- INDUCTION: By treatment with endotoxins or cytokines.
 CC -I- SIMILARITY: Belongs to the NOS family.
 CC -I- SIMILARITY: Contains 1 flavodoxin-like domain.

 CC This Swiss-Prot entry is copyright. It is produced through a collaboration
 CC between the Swiss Institute of Bioinformatics and the EMBL outstation -
 CC the European Bioinformatics Institute. There are no restrictions on its
 CC use as long as its content is in no way modified and this statement is not
 CC removed.

CC -!- FUNCTION: Converts molybdopterine precursor Z into molybdopterine.
CC This requires the incorporation of two sulfur atoms into precursor
CC Z to generate a dithiolene group. The sulfur atoms are provided by
CC the active form of the small subunit, whose activation involves
CC the acquisition of sulfur and the activity of moeB/chlN.
CC -!- PATHWAY: Molybdenum cofactor biosynthesis.
CC -!- SUBUNIT: Heterodimer of 2 moaD subunits and 2 moaE subunits.
CC -!- INTERACTION: moaE; NbExp=1; IntAct=EBI-554366, EBI-554376;
CC P30749; moaE; NbExp=1; IntAct=EBI-554366, EBI-543702;
CC -!- INDUCTION: By anaerobiosis, repressed by the molybdenum cofactor.
CC -!- MASS SPECTROMETRY: MW=8773.6; MW_ERR=0.2; METHOD=Electrospray;
CC RANGE=1-81; NOTE=Ref. 4.
CC -!- SIMILARITY: Belongs to the moaD family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 XX
 XX Preventing/treating amyloid-related disease, especially Alzheimer's
 XX disease, comprises administering antigenic all-D peptide, eg. as vaccine,
 XX which elicits production of antibodies to prevent fibrillogenesis and
 XX associated cellular toxicity.
 XX
 XX Disclosure; Page 10; 31pp; English.
 XX
 XX The present sequence is that of an all-D peptide suitable for use for
 XX preparing vaccines for preventing or treating Alzheimer's disease and
 XX other amyloid related disorders in humans. It is based on a portion of
 XX amyloid-beta peptide (see AAB82622), and may be modified by removing or
 XX inserting 1 or more amino acid residues, or by substituting 1 or more
 XX amino acid residues with other amino acid residues or non-amino acid
 XX fragments. Vaccines of the invention are produced using 'non-self'
 XX peptides synthesised from the unnatural D-configuration amino acids to
 XX avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 XX aggregated to be operative or immunogenic. They preferably interact with
 XX at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 XX CAG-binding site region, the amyloid-beta peptide, or their immunogenic
 XX fragments, protein conjugates, immunogenic derivative peptides and
 XX immunogenic peptidomimetics. Examples include all-D peptides
 XX corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 XX 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 XX in AAB82623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 XX preventing fibrillogenesis and associated cellular toxicity. The amyloid
 XX related diseases may be localised amyloidosis, e.g. diabetes type II,
 XX neurodegenerative diseases, e.g. bovine spongiform encephalitis,
 XX Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 XX prion protein related disorders, or systemic amyloidosis associated with
 XX chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
 XX rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 XX amyloidosis found in long-term haemodialysis patients

 XX Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's
 PT disease comprises contacting blood vessel wall cell with amyloid-beta 40
 PT inhibitor.
 XX
 XX Disclosure; Page 10; 68pp; English.
 XX The present invention relates to a new method of inhibiting cerebral
 CC amyloid angiopathy. The new method of the invention involves contacting a
 CC blood vessel wall cell with an amyloid-beta40 inhibitor. The invention
 CC can be used for treating disease states characterised by cerebral amyloid
 CC angiopathy, particularly Alzheimer's disease, hereditary cerebral
 CC haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke.
 CC The present sequence represents one of a group of peptides (AAU11648-
 CC AAU11669, AAU11910 & AAU11911) that were used in the invention as a
 CC carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor
 CC was used in the invention to treat a disease state characterised by
 CC cerebral amyloid angiopathy (CAA)

 XX
 XX Claim 1; Page 59; 44pp; English.
 XX The invention relates to a method for prevention and/or treatment of an
 CC amyloid-related disease which comprises administration of an all-D -
 CC amyloid-beta peptide. The method is used for preventing and/or treating
 CC Alzheimer's and other amyloid related disease e.g. cerebral amyloid
 CC angiopathy; for altering serum levels of amyloid-beta in a mammal and
 CC favours the clearance of soluble amyloid-beta or fibril amyloid-beta from
 CC the mammal; and reducing or inhibiting the formation of plaques. It is
 CC also used for treating AA (reactive) amyloid diseases including
 CC inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic
 CC arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy,
 CC Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's
 CC disease. AA deposits are also produced as a result of chronic microbial
 CC infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
 CC ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
 CC Certain malignant neoplasms can also result in AA fibril amyloid deposits
 CC including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung
 CC and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The
 CC present sequence is an Abeta peptide used to illustrate the method of the
 CC invention

XX Novel inhibitory peptides which inhibit and structurally block abnormal

XX PT folding of protein into amyloid or amyloid-like deposit and into

XX pathological beta-sheet rich conformation, useful for treating

XX Alzheimer's disease.

XX Disclosure; Col 51-52; 51pp; English.

XX The invention describes an isolated inhibitory peptide (I) which

XX interacts with a hydrophobic beta-sheet forming cluster of amino acid

XX residues on a protein or peptide for amyloid or amyloid-like deposit

XX formation, and inhibits or structurally blocks the abnormal folding of

CC proteins and peptides into amyloid or amyloid-like deposits and into
 CC pathological beta-sheet-rich conformation. (I) is useful for disorders or
 CC diseases associated with abnormal protein folding into amyloid or amyloid
 CC -like deposits or into pathological beta-sheet-rich precursors of such
 CC deposits, such as Alzheimer's disease, Down's syndrome, other amyloidosis
 CC disorders, human prion diseases, such as kuru, Creutzfeldt-Jakob disease
 CC (CJD), Gerstmann-Strausler-Scheinker syndrome (GSS), prion associated
 CC human neurodegenerative diseases as well as animal prion diseases such as
 CC scrapie, spongiform encephalopathy, transmissible mink encephalopathy and
 CC chronic wasting disease of mule deer and elk. (I) is also useful for
 CC detecting and diagnosing the presence or absence of amyloid or amyloid-
 CC like deposits in vivo and its precursors. This is the amino acid sequence
 CC of peptide associated with the inhibition of amyloid or amyloid like
 CC deposits

XX New inhibitory peptide, useful for preparing a composition for
 PT diagnosing, preventing or treating disorders associated with amyloid-like
 PT fibril deposits, e.g. Alzheimer's disease, or prion related
 PT encephalopathies.
 XX
 XX Claim 1; Page 28; 52pp; English.
 XX
 CC The invention relates to inhibitory peptide comprising a portion of at
 CC least three amino acid residues and a sequence predicted not to adopt a
 CC beta-sheet structure that associates with a hydrophobic beta-sheet
 CC cluster on a protein or peptide involved in the abnormal folding into a
 CC beta-sheet structure, to structurally block the abnormal folding of the
 CC protein or peptide. The inhibitory peptide is useful for preparing a
 CC composition for preventing, treating or detecting disorders or diseases
 CC associated with amyloid-like fibril deposits e.g. Alzheimer's disease and
 CC prion related encephalopathies. The invention is also useful in gene

CC therapy. The present sequence is a peptide used in the invention

XX Amyloid modulator useful for treating a disorder associated with
PT amyloidosis, comprises an amyloidogenic protein and/or a peptide fragment
PT coupled to a modifying group.
XX Example 12; Page 35; 41pp; English.
XX The invention describes an amyloid modulator comprising an amyloidogenic
CC protein and/or peptide fragment coupled to a modifying group so that the
CC compound modulates the aggregation of natural amyloid proteins or
CC peptides. The modulator is used for treating a disorder associated with
CC amyloidosis e.g. familial amyloid polyneuropathy (Portuguese, Japanese
CC and Swedish types), familial amyloid cardiomyopathy (Danish type),
CC isolated cardiac amyloid, systemic senile amyloidosis, scrapie, bovine
CC spongiform encephalopathy, Creutzfeldt-Jakob disease, adult onset
CC diabetes, Gerstmann-Strausler-Scheinker syndrome, insulinoma, isolated
CC atrial amyloidosis, idiopathic (primary) amyloidosis, myeloma or
CC macroglobulinemia-associated amyloidosis, primary localized cutaneous
CC nodular amyloidosis associated with Sjogren's syndrome, reactive
CC (secondary) amyloidosis, familial Mediterranean Fever and familial
CC amyloid nephropathy with urticaria and deafness (Muckle-Wells syndrome),
CC hereditary cerebral haemorrhage with amyloidosis of Icelandic type,
CC amyloidosis associated with long term haemodialysis, hereditary non-
CC neuropathic systemic amyloidosis (familial amyloid polyneuropathy I),
CC familial amyloidosis of Finnish type, amyloidosis associated with
CC medullary carcinoma of the thyroid, fibrinogen-associated hereditary
CC renal amyloidosis and lysozyme-associated hereditary systemic
CC amyloidosis. The compound is capable of altering and inhibiting beta-
CC amyloid protein (beta-AP) aggregation of natural amyloidogenic proteins
CC or peptides when contacted with a molar excess amount of natural beta-APs
CC relative to the modulator. This sequence represents a fragment of the
CC long form of beta-amyloid used in the creation of an amyloid modulator

XX Amyloid modulator compound useful for treatment of an amyloidogenic
PT disease such as Alzheimer's disease comprises an aggregation core domain
PT and a modifying group attached to it.
XX Disclosure; Col 19; 54pp; English.
XX The present invention describes an amyloid modulator compound (I)
CC comprising an aggregation core domain and a modifying group attached to
CC it. (I) has neurotropic, neuroprotective, immunosuppressive, antimicrobial,
CC antidiabetic, antipyretic, dermatological, cardiovascular, nephrotropic
CC and auditory activities, and can be used as a natural amyloid aggregation
CC inhibitor and a neurotoxicity inhibitor of natural beta amyloid peptide
CC (beta-AP). (I) are used in the manufacture of a medicament for the
CC diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's
CC disease and other clinical occurrences of beta amyloid deposition such as
CC Down's syndrome individuals and in patients with hereditary cerebral
CC haemorrhage with amyloidosis, and for treating a disorder associated with
CC amyloidosis such as familial amyloid polyneuropathy. (I) reduces the
CC toxicity of natural beta-AP aggregates to cultured neuronal cells. (I)
CC not only reduces the formation of neurotoxic aggregates but also have the
CC ability to reduce the neurotoxicity of performed A-beta fibrils. The
CC present sequence represents a beta-AP peptide, which is used in the
CC exemplification of the present invention

PT New isolated mammalian anti-amyloid antibodies useful for treating
 PT amyloid-associated disorders, such as Alzheimer's disease, cancer,
 PT allergies, autoimmune disease, Parkinson's disease, multiple sclerosis,
 PT migraine and dementia.

XX Example 4; SEQ ID NO 128; 306pp; English.

XX The invention relates to at least one isolated mammalian amyloid antibody
 CC comprising at least one variable region comprising at least one heavy
 CC chain and at least one light chain, of a fully defined sequence of SEQ ID
 CC NOS: 48, 49, 59, 60, 69, 70, 79 and 80, respectively. Also described are:
 CC (i) at least one isolated mammalian amyloid antibody that binds to the
 CC same region of an amyloid polypeptide as an antibody comprising at least
 CC one heavy chain or light chain complementarity determining region (CDR)
 CC having the amino acid sequence of at least one of SEQ ID NO: 73-78, (ii)
 CC at least one isolated mammalian amyloid antibody, comprising at least one
 CC human CDR, where the antibody specifically binds at least one epitope
 CC selected from amino acids 2-7, 3-8, 33-42, or 34-40 of a fully defined
 CC sequence of 42 amino acids (SEQ ID NO: 50), (iii) an isolated nucleic
 CC acid encoding at least one of any of the isolated mammalian amyloid
 CC antibodies mentioned and having at least one human CDR of a fully defined
 CC sequence of SEQ ID NO: 51, 52, 61, 62, 71, 72, 81 and 82, (iv) an
 CC isolated nucleic acid vector comprising an isolated nucleic acid encoding
 CC an amyloid antibody, (v) a prokaryotic or eukaryotic host cell comprising
 CC an isolated nucleic acid encoding an amyloid antibody, (vi) a method of
 CC producing at least one amyloid antibody, (vii) a composition comprising
 CC at least one of any of the isolated mammalian amyloid antibodies
 CC mentioned, and at least one pharmaceutical carrier or diluent, (viii) an
 CC anti-idiotypic antibody or fragment that specifically binds at least one
 CC of the amyloid antibodies mentioned, (ix) a method of diagnosing or
 CC treating an amyloid related condition in a cell, tissue, organ or animal,
 CC comprising contacting or administering a composition comprising at least
 CC one of the antibodies mentioned, with, or to, the cell, tissue, organ or
 CC animal, (x) a medical device comprising at least one amyloid antibody
 CC mentioned, where the device is suitable for contacting or administering
 CC at least one amyloid antibody, (xi) an article of manufacture for human
 CC pharmaceutical or diagnostic use, comprising packaging material and a
 CC container comprising a solution or a lyophilized form of at least one of
 CC the amyloid antibodies mentioned, and (xii) a method of producing at
 CC least one of the isolated mammalian amyloid antibodies, comprising
 CC providing a host cell or transgenic animal or transgenic plant or plant
 CC cell capable of expressing the antibody in recoverable amounts. The
 CC methods and compositions of the present invention are useful for
 CC producing therapeutic compositions and devices for treating amyloid-
 CC associated disorders, such as Alzheimer's disease, cancer, allergies,
 CC autoimmune disease, Parkinson's disease, AIDS, multiple sclerosis,
 CC migraine, dementia and infections. This sequence represents a peptide
 CC from human beta-amyloid probed with anti-beta-amyloid IgG antibodies.

 XX Modulators of amyloid aggregation - comprising, e.g. amyloidogenic
 PT protein coupled (in)directly to at least 1 modifying gp., useful in
 PT treatment of Alzheimer's disease.
 XX
 PS Claim 16; Page 90; 106pp; English.
 XX
 CC AAW02310-W02332 represent the peptide portions of the beta-amyloid
 CC modulator compounds of the invention. Beta-amyloid peptide is a 4
 CC kilodalton peptide that is the major protein component of amyloid
 CC plaques. Amyloid plaques are present both in the brain lesions, and in
 CC the walls of cerebral blood vessels in Alzheimer's disease patients. The
 CC amyloid modulators of the invention comprise an amyloidogenic protein or
 CC peptide (such as this sequence) coupled directly or indirectly to at
 CC least one modifying group. The modifying group is preferably a cyclic,
 CC heterocyclic, or polycyclic group, such as decalin, a cholanyl group, a
 CC biotin containing group, or a fluorescein containing group. These
 CC compounds then modulate the aggregation of these sequences to natural
 CC amyloid proteins or peptides when contacted with the natural
 CC amyloidogenic proteins or peptides. The modulator compounds can be used
 CC in the treatment of disorders associated with amyloidosis, such as
 CC familial amyloid polyneuropathy, familial amyloid cardiomyopathy,
 CC isolated cardiac amyloidosis, systemic senile amyloidosis, scrapie,
 CC bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, adult-onset
 CC diabetes, insulinoma, familial Mediterranean fever, familial amyloid
 CC nephropathy with urticaria and deafness, hereditary cerebral haemorrhage
 CC and other types of amyloidosis. The modulators are also useful for the
 CC treatment of disorders associated with beta-amyloidosis, especially
 CC Alzheimer's disease

 XX New peptide(s) derived from beta-amyloid peptide that inhibit amyloid
 PT aggregation - and neurotoxicity, specifically for treatment and
 PT prevention of Alzheimer's disease.
 XX
 PS Example 12; Col 64; 52pp; English.
 XX
 CC The present invention describes beta-amyloid peptide (BAP) derivatives.
 CC The BAP derivatives inhibit aggregation of amyloidogenic proteins and
 CC peptides, specifically BAP, and their neurotoxicity, so are useful for
 CC treating and preventing any disease involving amyloidosis, specifically
 CC Alzheimer's disease but also Down's syndrome, familial amyloid
 CC polyneuropathy or cardiomyopathy, bovine spongiform encephalopathy and
 CC Creutzfeldt-Jakob disease. The BAP derivatives are also used to diagnose
 CC these diseases, in vitro or in vivo, by detecting binding of BAP to
 CC labelled BAP derivatives. Some BAP derivatives inhibit BAP aggregation
 CC even when BAP is present in molar excess. The present sequence represents
 CC a BAP derivative

 PT Amyloid modulator useful for treating a disorder associated with
 PT amyloidosis, comprises an amyloidogenic protein and/or a peptide fragment
 PT coupled to a modifying group.
 PT
 PS Example 12; Page 35; 41pp; English.
 XX
 CC The invention describes an amyloid modulator comprising an amyloidogenic
 CC protein and/or peptide fragment coupled to a modifying group so that the
 CC compound modulates the aggregation of natural amyloid proteins or
 CC peptides. The modulator is used for treating a disorder associated with
 CC amyloidosis e.g. familial amyloid polyneuropathy (Portuguese, Japanese
 CC and Swedish types), familial amyloid cardiomyopathy (Danish type),
 CC isolated cardiac amyloid, systemic senile amyloidosis, scrapie, bovine
 CC spongiform encephalopathy, Creutzfeldt-Jakob disease, adult onset
 CC diabetes, Gerstmann-Strausler-Scheinker syndrome, insulinoma, isolated
 CC atrial amyloidosis, idiopathic (primary) amyloidosis, myeloma or
 CC macroglobulinaemia-associated amyloidosis, primary localised cutaneous
 CC nodular amyloidosis associated with Sjogren's syndrome, reactive
 CC (secondary) amyloidosis, familial Mediterranean Fever and familial
 CC amyloid nephropathy with urticaria and deafness (Muckle-Wells syndrome),
 CC hereditary cerebral haemorrhage with amyloidosis of Icelandic type,
 CC amyloidosis associated with long term haemodialysis, hereditary non-
 CC neuropathic systemic amyloidosis (familial amyloid polyneuropathy III),
 CC familial amyloidosis of Finnish type, amyloidosis associated with
 CC medullary carcinoma of the thyroid, fibrinogen-associated hereditary
 CC renal amyloidosis and lysozyme-associated hereditary systemic
 CC amyloidosis. The compound is capable of altering and inhibiting beta-
 CC amyloid protein (beta-AP) aggregation of natural amyloidogenic proteins
 CC or peptides when contacted with a molar excess amount of natural beta-APs
 CC relative to the modulator. This sequence represents a fragment of the
 CC long form of beta-amyloid used in the creation of an amyloid modulator

 XX
 PT Amyloid modulator compound useful for treatment of an amyloidogenic
 PT disease such as Alzheimer's disease comprises an aggregation core domain
 PT and a modifying group attached to it.
 XX
 PS Disclosure; Col 18; 54pp; English.
 XX
 CC The present invention describes an amyloid modulator compound (I)
 CC comprising an aggregation core domain and a modifying group attached to
 CC it. (I) has neurotropic, neuroprotective, immunosuppressive, antimicrobial,
 CC antidiabetic, antipyretic, dermatological, cardiovascular, nephrotropic
 CC and auditory activities, and can be used as a natural amyloid aggregation
 CC inhibitor and a neurotoxicity inhibitor of natural beta amyloid peptide
 CC (beta-AP). (I) are used in the manufacture of a medicament for the
 CC diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's
 CC disease and other clinical occurrences of beta amyloid deposition such as
 CC Down's syndrome individuals and in patients with hereditary cerebral
 CC haemorrhage with amyloidosis, and for treating a disorder associated with
 CC amyloidosis such as familial amyloid polyneuropathy. (I) reduces the
 CC toxicity of natural beta-AP aggregates to cultured neuronal cells. (I)
 CC not only reduces the formation of neurotoxic aggregates but also have the
 CC ability to reduce the neurotoxicity of performed A-beta fibrils. The
 CC present sequence represents a beta-AP peptide, which is used in the
 CC exemplification of the present invention

 PS Example 3; Page 26; 73pp; English.
 XX
 CC The present invention describes a method (M1) for analysing cleavage of a
 CC polymer. M1 comprises: (a) providing a sample of the polymer, a portion
 CC of the polymer molecules having been labeled at a position on one side of
 CC the potential cleavage site with a first isotopic label and a portion of
 CC the polymer molecules having been labeled at a position on the opposite
 CC side of the potential cleavage site with a second isotopic label; (b)
 CC incubating the sample under conditions suitable for cleavage at the
 CC potential cleavage site; and (c) analysing the mass(es) of any cleaved
 CC fragments by mass spectrometry and thereby determining whether and/or
 CC where cleavage has taken place. M1 is useful for analysing cleavage of a
 CC polymer, where the polymer is a linear polymer, and comprises a peptide
 CC or protein. Methods from the present invention can be used in discovering
 CC new or improved synthetic substrates for both known and unknown enzymes,
 CC e.g. enzymes identified from the human genome. The methods are also
 CC useful to identify the sequence origin, and in screening methods to
 CC identify new substrates for enzymes, in positional peptide scanning
 CC libraries, in *in vivo/ex vivo* in vitro peptide, and in assaying methods
 CC for oligonucleotide or peptide sequencing and in measuring differential
 CC protein expression. The methods are useful for monitoring the cleavage of
 CC polypeptides or polynucleotides, and for determining optimal polymer
 CC substrates. ABP57505 to ABP57605 represent peptides used in the
 CC exemplification of the present invention

 DR Novel inhibitory peptides which inhibit and structurally block abnormal
 PT folding of protein into amyloid or amyloid-like deposit and into
 PT pathological beta-sheet rich conformation, useful for treating
 PT Alzheimer's disease.
 XX Disclosure; Col 47-48; 51pp; English.
 PS The invention describes an isolated inhibitory peptide (I) which
 CC interacts with a hydrophobic beta-sheet forming cluster of amino acid
 CC residues on a protein or peptide for amyloid or amyloid-like deposit
 CC formation, and inhibits or structurally blocks the abnormal folding of
 CC proteins and peptides into amyloid or amyloid-like deposits and into
 CC pathological beta-sheet rich conformation. (I) is useful for disorders or
 CC diseases associated with abnormal protein folding into amyloid or amyloid
 CC -like deposits or into pathological beta-sheet-rich precursors of such
 CC deposits, such as Alzheimer's disease, Down's syndrome, other amyloidosis
 CC disorders, human prion diseases, such as kuru, Creutzfeldt-Jakob disease
 CC (CJD), Gerstmann-Strausler-Scheinker syndrome (GSS), prion associated
 CC human neurodegenerative diseases as well as animal prion diseases such as
 CC scrapie, spongiform encephalopathy, transmissible mink encephalopathy and
 CC chronic wasting disease of mule deer and elk. (I) is also useful for
 CC detecting and diagnosing the presence or absence of amyloid or amyloid-
 CC like deposits in vivo and its precursors. This is the amino acid sequence
 CC of peptide associated with the inhibition of amyloid or amyloid like
 CC deposits

 CC amyloid-related disease which comprises administration of an all-D -
 CC amyloid-beta peptide. The method is used for preventing and/or treating
 CC Alzheimer's and other amyloid related disease e.g. cerebral amyloid
 CC angiopathy; for altering serum levels of amyloid-beta in a mammal and
 CC favours the clearance of soluble amyloid-beta or fibril amyloid-beta from
 CC the mammal; and reducing or inhibiting the formation of plaques. It is
 CC also used for treating AA (reactive) amyloid diseases including
 CC inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic
 CC arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy,
 CC Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's
 CC disease. AA deposits are also produced as a result of chronic microbial
 CC infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
 CC ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
 CC Certain malignant neoplasms can also result in AA fibril amyloid deposits
 CC including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung
 CC and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The
 CC present sequence is an Abeta peptide used to illustrate the method of the
 CC invention

 XX PT New inhibitory peptide, useful for preparing a composition for
 PT diagnosing, preventing or treating disorders associated with amyloid-like
 PT fibril deposits, e.g. Alzheimer's disease, or prion related
 PT encephalopathies.
 XX PS Claim 1; Page 25; 52pp; English.
 XX CC The invention relates to inhibitory peptide comprising a portion of at
 CC least three amino acid residues and a sequence predicted not to adopt a
 CC beta-sheet structure that associates with a hydrophobic beta-sheet
 CC cluster on a protein or peptide involved in the abnormal folding into a
 CC beta-sheet structure, to structurally block the abnormal folding of the
 CC protein or peptide. The inhibitory peptide is useful for preparing a
 CC composition for preventing, treating or detecting disorders or diseases
 CC associated with amyloid-like fibril deposits e.g. Alzheimer's disease and
 CC prion related encephalopathies. The invention is also useful in gene
 CC therapy. The present sequence is a peptide used in the invention

 XX New amyloid beta peptide, useful for preparing a composition for
 PT preventing the formation or progression of amyloid plaques for preventing
 PT or treating Alzheimer's disease.
 XX PS Example 2; SEQ ID NO 28; 69pp; English.
 XX CC The present invention describes an isolated amyloid beta peptide or its
 CC homologue which is selected by a method comprising: (a) determining the
 CC binding value of each amino acid of a subsequence of amyloid beta peptide
 CC upon binding to a HLA class I and/or class II molecule of interest; (b)
 CC determining the resulting score of all amino acids of the subsequence,
 CC based on the binding value of each amino acid obtained in step (1); and
 CC (c) comparing the resulting score to a preselected value. Also described:
 CC (1) a vaccine comprising the isolated amyloid beta peptide and a carrier
 CC or diluent; (2) determining T-cell epitopes within amyloid beta peptide;
 CC (3) predicting the reaction of an individual to a vaccine; (4) matching a
 CC vaccine comprising a beta amyloid or homologue peptide to an individual,
 CC for immunisation of an individual based on the HLA haplotype of the
 CC individual; (5) a kit for matching a vaccine comprising amyloid beta
 CC peptide to an individual based on the HLA haplotype of the individual;
 CC and (6) preventing the formation or progression of amyloid plaques. The
 CC amyloid beta peptide has neuroprotective activity, and can be used in
 CC vaccines. The amyloid beta peptide is useful for preparing a composition
 CC for preventing the formation or progression of amyloid plaques for
 CC preventing or treating Alzheimer's disease. The present sequence
 CC represents an amyloid beta (A-beta) peptide, which is used in an example
 CC from the present invention.

 XX
 XX Preventing/treating amyloid-related disease, especially Alzheimer's
 PT disease, comprises administering antigenic all-D peptide, eg. as vaccine,
 PT which elicits production of antibodies to prevent fibrillogenesis and
 PT associated cellular toxicity.

PS Disclosure; Page 11; 31pp; English.

XX The present sequence is that of an all-D peptide suitable for use in
 CC preparing vaccines for preventing or treating Alzheimer's disease and
 CC other amyloid related disorders in humans. It is based on a portion of
 CC amyloid-beta peptide (see AA882622), and may be modified by removing or
 CC inserting 1 or more amino acid residues, or by substituting 1 or more
 CC amino acid residues with other amino acid residues or non-amino acid
 CC fragments. Vaccines of the invention are produced using 'non-self',
 CC peptides synthesised from the unnatural D-configuration amino acids to
 CC avoid the drawbacks of 'self' proteins. The all-D peptides need not be
 CC aggregated to be operative or immunogenic. They preferably interact with
 CC at least 1 region of an amyloid protein, e.g. the beta-sheet region or
 CC GAG-binding site region, the amyloid-beta peptide, or their immunogenic
 CC fragments, protein conjugates, immunogenic derivative peptides and
 CC immunogenic peptidomimetics. Examples include all-D peptides
 CC corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and
 CC 36-42 of the amyloid-beta peptide and the all-D derivative peptides given
 CC in AA882623-64. The vaccine elicits a preferential TH-2 or TH-1 response,
 CC preventing fibrillogenesis and associated cellular toxicity. The amyloid
 CC related diseases may be localised amyloidosis, e.g. diabetes type II,
 CC neurodegenerative diseases, e.g. bovine spongiform encephalitis,
 CC Creutzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and
 CC prion protein related disorders, or systemic amyloidosis associated with
 CC chronic infection (e.g. tuberculosis) or chronic inflammation (e.g.
 CC rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic
 CC amyloidosis found in long-term haemodialysis patients

XX New amyloid-targeting imaging agents useful for in vivo imaging amyloid

XX plaques and/or for the treatment of amyloidosis disorders.

XX Claim 49; Page 22; 57pp; English.

XX The invention relates to an amyloid-targeting imaging agent comprising an
 CC amyloid targeting moiety, a linker moiety and a labelling moiety. The
 CC agent is of general formula A-t-(A₁-n₁-K₁-A₁-a₁-b₁ (I) where z = 0-1;
 CC A₁ = an amyloid targeting moiety; A₁-n₁-K₁ = a linker moiety; and A₁-a₁-b₁
 CC = a labelling moiety. Also included are imaging amyloid deposition or
 CC diagnosing an amyloid-related condition in a patient involving
 CC administering (I) to the patient, and ultrasound imaging (I) in the
 CC patient to determine the presence of amyloid or amyloid-related condition
 CC ; and a kit for preparing a radiopharmaceutical preparation comprising
 CC (I), a reducing agent, a buffering agent, a transchelating agent, and
 CC instructions for the preparation and use of the radiopharmaceutical in
 CC the imaging of amyloid or an amyloid-related condition. The agents are
 CC used for imaging amyloid deposition and for diagnosing an amyloid related
 CC condition e.g. Creutzfeldt-Jakob disease (CJD), kuru, transmissible
 CC cerebral amyloidosis (transmissible virus dementia), familial CJD,
 CC scrapie, transmissible mink encephalopathy, bovine spongiform
 CC encephalopathy (BSE), inflammation-associated amyloid, type II diabetes,
 CC primary amyloidosis, Alzheimer's disease, prion-mediated diseases,
 CC cerebral amyloidosis, light chain-related amyloidosis, cerebral
 CC dialysis-related amyloidosis, light chain-related amyloidosis, cerebral
 CC amyloid angiopathy. The agents are capable of crossing the blood-brain
 CC barrier and are capable of binding specifically to amyloid plaques. The
 CC present sequence is a peptide forming the amyloid targeting moiety of the
 CC agent of the invention

 XX Analyzing cleavage of polymer, by providing polymer sample, incubating
 PT the sample with labeled isotope for cleavage at potential cleavage site,
 PT and analyzing the masses of any uncleaved fragments by mass spectrometry.
 XX
 PS Example 3; Page 22; 73pp; English.
 XX
 CC The present invention describes a method (M1) for analysing cleavage of a
 CC polymer. M1 comprises: (a) providing a sample of the polymer, a portion
 CC of the polymer molecules having been labeled at a position on one side of
 CC the potential cleavage site with a first isotopic label and a portion of
 CC the polymer molecules having been labeled at a position on the opposite
 CC side of the potential cleavage site with a second isotopic label; (b)
 CC incubating the sample under conditions suitable for cleavage at the
 CC potential cleavage site; and (c) analysing the mass(es) of any cleaved
 CC fragments by mass spectrometry and thereby determining whether and/or
 CC where cleavage has taken place. M1 is useful for analysing cleavage of a
 CC polymer, where the polymer is a linear polymer, and comprises a peptide
 CC or protein. Methods from the present invention can be used in discovering
 CC new or improved synthetic substrates for both known and unknown enzymes,
 CC e.g. enzymes identified from the human genome. The methods are also
 CC useful to identify the sequence origin, and in screening methods to
 CC identify new substrates for enzymes, in positional peptide scanning
 CC libraries, in *in vivo/ex vivo*/in vitro peptide, and in assaying methods
 CC for oligonucleotide or peptide sequencing and in measuring differential
 CC protein expression. The methods are useful for monitoring the cleavage of
 CC polypeptides or polynucleotides, and for determining optimal polymer
 CC substrates. ABP57505 to ABP57605 represent peptides used in the
 CC exemplification of the present invention

 XX
 PS Claim 1; Page 59; 44pp; English.
 CC
 CC The invention relates to a method for prevention and/or treatment of an
 CC amyloid-related disease which comprises administration of an all-D -
 CC amyloid-beta peptide. The method is used for preventing and/or treating
 CC Alzheimer's and other amyloid related disease e.g. cerebral amyloid
 CC angiopathy; for altering serum levels of amyloid-beta in a mammal and
 CC favours the clearance of soluble amyloid-beta or fibril amyloid-beta from
 CC the mammal; and reducing or inhibiting the formation of plaques. It is
 CC also used for treating AA (reactive) amyloid diseases including
 CC inflammatory diseases e.g. rheumatoid arthritis, juvenile chronic
 CC arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy,
 CC Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's
 CC disease. AA deposits are also produced as a result of chronic microbial
 CC infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus
 CC ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
 CC Certain malignant neoplasms can also result in AA fibril amyloid deposits
 CC including Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung
 CC and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The
 CC present sequence is an Abeta peptide used to illustrate the method of the
 CC invention

 XX
 XX New amyloid-targeting imaging agent, useful for diagnosing an amyloid-
 PT related condition, e.g. Creutzfeldt-Jakob disease, bovine spongiform
 PT encephalopathy, primary amyloidosis or Alzheimer's disease.
 XX
 XX Disclosure; SEQ ID NO 19; 34pp; English.
 XX
 XX The invention relates to an amyloid-targeting imaging agent. The imaging
 CC agent comprises an amyloid targeting moiety (such as a peptide) joined to
 CC a labeling moiety via a linking moiety, and is preferably able to cross
 CC the blood-brain barrier. The invention also relates to a kit for
 CC preparing a radiopharmaceutical preparation from the imaging agent of the
 CC invention, a method for imaging amyloid deposition in a patient and a
 CC method for diagnosing an amyloid-related condition in a patient. The
 CC amyloid-targeting imaging agent is useful in imaging to diagnose amyloid-
 CC related conditions such as Creutzfeldt-Jakob disease (CJD), Kuru,
 CC transmissible cerebral amyloidosis (also known as transmissible virus
 CC dementias), familial CJD, scrapie, transmissible mink encephalopathy,
 CC bovine spongiform encephalopathy (BSE), inflammation-associated amyloid,
 CC type II diabetes, primary amyloidosis, feline spongiform encephalopathy,
 CC non-transmissible cerebral amyloidosis (e.g. Alzheimer's disease), prion-
 CC mediated diseases, dialysis-related amyloidosis, light chain-related
 CC amyloidosis, cerebral amyloid angiopathy or Alzheimer's disease in a
 CC patient. The agent does not exhibit excessive toxicity or irritation,
 CC does not induce an allergic response, and permits an earlier diagnosis of
 CC amyloid-related conditions, thereby allowing earlier treatment and hence
 CC prevention of the undesirable effects of such disorders. Sequences
 CC ADV37921-ADV37947 and ADV37949 represent peptides which may be used as
 CC the amyloid-targeting moiety in an imaging agent of the invention.

 XX
 XX New inhibitors of fibrillogenesis proteins or peptides - used for
 PT preventing, treating or detecting amyloidosis disorders such as
 PT Alzheimer's disease.
 XX
 XX Example 1; Fig 9; 63pp; English.
 XX
 XX A method has been developed for the prevention or treatment of a disorder
 CC or disease associated with the formation of amyloid or amyloid-like
 CC deposits, involving the abnormal folding of a protein or peptide. The
 CC method involves administering an inhibitory peptide which prevents the
 CC abnormal folding or which dissolves existing amyloid or amyloid-like
 CC deposits, where the peptide comprises a sequence of 3-15 amino acid
 CC residues and has a hydrophobic cluster of at least 3 amino acids, where
 CC at least one of the 3 amino acids is a beta-sheet blocking amino acid
 CC residue selected from Pro, Gly, Asn and His. The present sequence
 CC represents an anti-amyloid peptide, Abeta, which inhibits abnormal
 CC protein folding. The inhibitory peptide is capable of associating with a
 CC structural determinant on the protein or peptide to structurally block
 CC and inhibit the abnormal folding into amyloid or amyloid-like deposits.
 CC The method can be used for preventing, treating or detecting e.g.
 CC Alzheimer's dementia or disease, Down's syndrome, other amyloidosis
 CC disorders, human prion diseases such as Kuru, Creutzfeldt-Jakob disease,
 CC Gerstmann-Strausler-Scheinker Syndrome, prion associated human
 CC neurodegenerative diseases or animal prion diseases such as scrapie,
 CC spongiform encephalopathy, transmissible mink encephalopathy and chronic
 CC wasting disease of mule deer and elk

XX Controlling self-assembly of peptide-based structures (e.g. nanotubes)
 PT comprises providing a controlled environment and placing segments of beta

PT -amyloids in the controlled environment to generate a self-assembling
 PT structure.
 XX
 PS Claim 1; SEQ ID NO 3; 46pp; English.
 XX
 CC The present invention describes a method (M1) for controlling self-
 CC assembly of self-assembling peptide-based structures by providing a
 CC controlled environment and placing segments of beta-amyloids in the
 CC controlled environment to generate a self-assembling structure. Also
 CC described: (1) a method (M1a) for controlling self-assembly of peptide-
 CC based structures comprising providing a controlled environment adapted to
 CC redirect a self-assembly process, and generating a self-assembling
 CC peptide-based structure by placing the self-assembling peptide in the
 CC controlled environment; and (2) a self-assembling peptide-based structure
 CC comprising beta-amyloid segments, optionally with a conservative amino
 CC acid substitution; and hydrogen bonds formed between the segments of the
 CC beta-amyloid. The method is useful in controlling the self-assembly of
 CC self-assembling peptide-based structures. The self-assembling peptide
 CC structures may be used in generating devices at a molecular level to
 CC permit molecular-level probing. The present sequence represents a human
 CC beta-amyloid 10-21 H13Q variant amino acid sequence, which is used in the
 CC exemplification of the present invention.

XX XX New isolated mammalian anti-amyloid antibodies useful for treating
PT amyloid-associated disorders, such as Alzheimer's disease, cancer,
PT allergies, autoimmune disease, Parkinson's disease, multiple sclerosis,
PT migraine and dementia.

XX Example 4; SEQ ID NO 115; 306pp; English.

XX The invention relates to at least one isolated mammalian amyloid antibody
PS comprising at least one variable region comprising at least one heavy
XX chain and at least one light chain, of a fully defined sequence of SEQ ID
CC NOS: 48, 49, 59, 60, 69, 70, 79 and 80, respectively. Also described are:
CC (i) at least one isolated mammalian amyloid antibody that binds to the
CC same region of an amyloid polypeptide as an antibody comprising at least
CC one heavy chain or light chain complementarity determining region (CDR)
CC having the amino acid sequence of at least one of SEQ ID NO: 73-78, (ii)
CC at least one isolated mammalian amyloid antibody, comprising at least one
CC human CDR, where the antibody specifically binds at least one epitope
CC selected from amino acids 2-7, 3-8, 33-42, or 34-40 of a fully defined
CC sequence of 42 amino acids (SEQ ID NO: 50), (iii) an isolated nucleic
CC acid encoding at least one of any of the isolated mammalian amyloid
CC antibodies mentioned and having at least one human CDR of a fully defined
CC sequence of SEQ ID NO: 51, 52, 61, 62, 71, 72, 81 and 82, (iv) an
CC isolated nucleic acid vector comprising an isolated nucleic acid encoding
CC an amyloid antibody, (v) a prokaryotic or eukaryotic host cell comprising
CC an isolated nucleic acid encoding an amyloid antibody, (vi) a method of
CC producing at least one amyloid antibody, (vii) a composition comprising
CC at least one of the isolated mammalian amyloid antibodies
CC mentioned, and at least one pharmaceutical carrier or diluent, (viii) an
CC anti-idiotypic antibody or fragment that specifically binds at least one
CC of the amyloid antibodies mentioned, (ix) a method of diagnosing or
CC treating an amyloid related condition in a cell, tissue, organ or animal,
CC comprising contacting or administering a composition comprising at least
CC one of the antibodies mentioned, with, or to, the cell, tissue, organ or
CC animal, (x) a medical device comprising at least one amyloid antibody
CC mentioned, where the device is suitable for contacting or administering
CC at least one amyloid antibody, (xi) an article of manufacture for human
CC pharmaceutical or diagnostic use, comprising packaging material and a
CC container comprising a solution or a lyophilized form of at least one of
CC the amyloid antibodies mentioned, and (xii) a method of producing at
CC least one of the isolated mammalian amyloid antibodies, comprising
CC providing a host cell or transgenic animal or transgenic plant or plant
CC cell capable of expressing the antibody in recoverable amounts. The
CC methods and compositions of the present invention are useful for
CC producing therapeutic compositions and devices for treating amyloid-
CC associated disorders, such as Alzheimer's disease, cancer, allergies,
CC autoimmune disease, Parkinson's disease, AIDS, multiple sclerosis,
CC migraine, dementia and infections. This sequence represents a peptide
CC from human beta-amyloid probed with anti-beta-amyloid IgG antibodies.

 XX PT Assaying activity of an a disintegrin and metalloprotease in whole cell
 PT system combining soluble substrate with whole cell system, and
 PT determining amount of product.
 XX PS Disclosure; Page 9; 34pp; English.
 XX CC The invention relates to the activity of a disintegrin and
 CC metalloprotease (ADAM) in a whole cell system assayed by selecting a
 CC soluble substrate that is specifically cleavable by the ADAM, combining
 CC the soluble substrate with the whole cell system under conditions that
 CC allow processing of the substrate to a product by the ADAM and
 CC determining the amount of the product as an indication of the ADAM
 CC activity. Also included is a method of determining the effect of a G-
 CC protein coupled receptor (GPCR) on the activity of an ADAM in a whole
 CC cell system comprising selecting a ligand known to modulate activity of
 CC the GPCR and a soluble substrate that is cleavable by the ADAM, preparing
 CC two mixtures of the whole cell system and the soluble substrate, where
 CC only one of the mixtures contains the ligand, incubating the mixtures
 CC under conditions that allow processing of the substrate to a product by
 CC the ADAM, if the ADAM is active, determining the amount of the product
 CC formed in each mixture and comparing the amount of product formed in
 CC separate mixtures to determine effect of the GPCR on the ADAM activity.
 CC The method may be adapted to assay the effect of a compound on the
 CC cleavage of the Beta-amyloid precursor protein (APP) at its alpha-
 CC secretase site by ADAM 17 or ADAM 10. The invention is used for the
 CC assaying for the activity of an ADAM in a whole cell system. The assay
 CC may be used in the diagnosis of diseases associated with ADAM activities
 CC e.g. Alzheimer's disease. The present sequence is the human APP peptide
 CC fragment containing the alpha-secretase site.

XX New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation (e.g. dementia).

XX Claim 1; Page 99; 312pp; English.

CC The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (1) a nucleic acid molecule

CC encoding (1); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (1), comprising culturing the host cell of (3) under conditions that allow synthesis of (1) and recovering (1) from the culture; (5) a composition comprising (1) or an antibody molecule produced by method (4); (6) a kit comprising (1), nucleic acid of (1), vector of (2) or host cell of (3); (7) optimising (1); (8) testing the resulting Fab optimisation library by panning against Abeta4/Abeta4; (9) identifying optimised clones; (10) expressing of selected, optimised clones; (11) preparing a pharmaceutical composition, comprising optimisation of (1), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a pharmaceutical composition prepared by method (8). (1) has neuroprotective, nontropic and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (I), nucleic acid molecule, vector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with amyloidogenesis and/or amyloid-plaque formation. The antibody molecule may also be used in preparing a diagnostic composition for the detection of the disease mentioned above. The antibody is used for the disintegration of beta-amyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.

Novel inhibitory peptides which inhibit and structurally block abnormal
PT folding of protein into amyloid or amyloid-like deposit and into
PT pathological beta-sheet rich conformation, useful for treating
PT Alzheimer's disease.

Disclosure; Col 51-52; 5lpp; English.

CC The invention describes an isolated inhibitory peptide (I) which
CC interacts with a hydrophobic beta-sheet forming cluster of amino acid
CC residues on a protein or peptide for amyloid or amyloid-like deposit
CC formation, and inhibits or structurally blocks the abnormal folding of
CC proteins and peptides into amyloid or amyloid-like deposits and into
CC pathological beta-sheet-rich conformation. (I) is useful for disorders or
CC diseases associated with abnormal protein folding into amyloid or amyloid
CC -like deposits or into pathological beta-sheet-rich precursors of such
CC deposits, such as Alzheimer's disease, Down's syndrome, other amyloidosis
CC disorders, human prion diseases, such as kuru, Creutzfeldt-Jakob disease
CC (CJD), Gerstmann-Strausler-Scheinker syndrome (GSS), prion associated
CC human neurodegenerative diseases as well as animal prion diseases such as
CC scrapie, spongiform encephalopathy, transmissible mink encephalopathy and
CC chronic wasting disease of mule deer and elk. (I) is also useful for
CC detecting and diagnosing the presence or absence of amyloid or amyloid-
CC like deposits in vivo and its precursors. This is the amino acid sequence
CC of peptide associated with the inhibition of amyloid or amyloid like
CC deposits

Novel inhibitory peptides which inhibit and structurally block abnormal
PT folding of protein into amyloid or amyloid-like deposit and into
PT pathological beta-sheet rich conformation, useful for treating
PT Alzheimer's disease.

Disclosure; Col 49-50; 5lpp; English.

CC The invention describes an isolated inhibitory peptide (I) which
CC interacts with a hydrophobic beta-sheet forming cluster of amino acid
CC residues on a protein or peptide for amyloid or amyloid-like deposit
CC formation, and inhibits or structurally blocks the abnormal folding of
CC proteins and peptides into amyloid or amyloid-like deposits and into
CC pathological beta-sheet-rich conformation. (I) is useful for disorders or
CC diseases associated with abnormal protein folding into amyloid or amyloid
CC -like deposits or into pathological beta-sheet-rich precursors of such
CC deposits, such as Alzheimer's disease, Down's syndrome, other amyloidosis
CC disorders, human prion diseases, such as kuru, Creutzfeldt-Jakob disease
CC (CJD), Gerstmann-Strausler-Scheinker syndrome (GSS), prion associated
CC human neurodegenerative diseases as well as animal prion diseases such as
CC scrapie, spongiform encephalopathy, transmissible mink encephalopathy and
CC chronic wasting disease of mule deer and elk. (I) is also useful for
CC detecting and diagnosing the presence or absence of amyloid or amyloid-
CC like deposits in vivo and its precursors. This is the amino acid sequence
CC of peptide associated with the inhibition of amyloid or amyloid like
CC deposits

 RA Levy E., Amorim A., Frangione B., Walker L.C.;
 RT "Beta-amyloid precursor protein gene in squirrel monkeys with cerebral
 RT amyloid angiopathy.";
 RL Neurobiol. Aging 16:805-808 (1995).
 CC -1- FUNCTION: Functions as a cell surface receptor and performs
 CC physiological functions on the surface of neurons relevant to
 CC neurite growth, neuronal adhesion and axonogenesis. Involved in
 CC cell motility and transcription regulation through protein-protein
 CC interactions (By similarity). Can promote transcription activation
 CC through binding to APBB1/rip60 and inhibit Notch signaling through
 CC interaction with Numb (By similarity). Couples to apoptosis-
 CC inducing pathways such as those mediated by G(O) and JIP (By
 CC similarity). Inhibits G(o) alpha ATPase activity (By similarity).
 CC Acts as a kinesin I membrane receptor, mediating the axonal
 CC transport of beta-secretase and presenilin 1 (By similarity). May
 CC be involved in copper homeostasis/oxidative stress through copper
 CC ion reduction. In vitro, copper-metallated APP induces neuronal
 CC death directly or is potentiated through Cu(2+)-mediated low-
 CC density lipoprotein oxidation (By similarity). Can regulate
 CC neurite outgrowth through binding to components of the
 CC extracellular matrix such as heparin and collagen I and IV (By
 CC similarity). The splice isoforms that contain the BPTI domain
 CC possess protease inhibitor activity (By similarity).
 CC -1- FUNCTION: Beta-amyloid peptides are lipophilic metal chelators
 CC with metal-reducing activity. Bind transient metals such as
 CC copper, zinc and iron (By similarity).
 CC -1- FUNCTION: The gamma-CTF peptides as well as the caspase-cleaved
 CC peptides, including C31, are potent enhancers of neuronal

CC apoptosis (By similarity).
 CC -1- SUBUNIT: Binds, via its C-terminus, to the PID domain of several
 CC cytoplasmic proteins, including APBB family members, the APBA
 CC family, MAPK8IP1, and SHC1, Numb and Dab1 (By similarity). Binding
 CC to Dab1 inhibits its serine phosphorylation (By similarity). Also
 CC interacts with GPCR-like protein BPP, FPRL1, APPBP1, IBI, KNS2
 CC (via its TPR domain) (By similarity), APPBP2 (via BAGS) and DDB1.
 CC In vitro, it binds MAPT via the WT-binding domains (By
 CC similarity). Associates with microtubules in the presence of ATP
 CC and in a kinesin-dependent manner (By similarity).
 CC -1- SUBCELLULAR LOCATION: Type I membrane protein. Cell surface
 CC protein that rapidly becomes internalized via clathrin-coated
 CC pits. During maturation, the immature APP (N-glycosylated in the
 CC endoplasmic reticulum) moves to the Golgi complex where complete
 CC maturation occurs (O-glycosylated and sulfated). After alpha
 CC secretase cleavage, soluble APP is released into the extracellular
 CC space and the C-terminal is internalized to endosomes and
 CC lysosomes. Some APP accumulates in secretory transport vesicles
 CC leaving the late Golgi compartment and returns to the cell
 CC surface. Gamma-CTF(59) peptide is located to both the cytoplasm
 CC and nuclei of neurons (By similarity).
 CC -1- ALTERNATIVE PRODUCTS:
 CC Event=Alternative splicing; Named isoforms=2;
 CC Comment=Additional isoforms seem to exist;
 CC Name=APP770;
 CC IsoId=Q95241-1; Sequence=Displayed;
 CC Name=APP695;
 CC IsoId=Q95241-2; Sequence=Not described;
 CC -1- DOMAIN: The basolateral sorting signal (BASS) is required for
 CC sorting of membrane proteins to the basolateral surface of
 CC epithelial cells (By similarity).
 CC -1- DOMAIN: The NPXY sequence motif found in many tyrosine-
 CC phosphorylated proteins is required for the specific binding of
 CC the PID domain. However additional amino acids either N- or C-
 CC terminal to the NPXY motif are often required for complete
 CC interaction. The PID domain-containing proteins which bind APP
 CC require the YENPTY motif for full interaction. These interactions
 CC are independent of phosphorylation on the terminal tyrosine
 CC residue. The NPXY site is also involved in clathrin-mediated
 CC endocytosis (By similarity).
 CC -1- PTM: Proteolytically processed under normal cellular conditions.
 CC Cleavage by alpha-secretase or alternatively by beta-secretase
 CC leads to generation and extracellular release of soluble APP
 CC peptides, S-APP-alpha and S-APP-beta, respectively, and the
 CC retention of corresponding membrane-anchored C-terminal fragments,
 CC C83 and C99. Subsequent processing of C83 by gamma-secretase
 CC yields P3 peptides. This is the major secretory pathway and is
 CC nonamyloidogenic. Alternatively, presenilin/nicastrin-mediated
 CC gamma-secretase processing of C99 releases the amyloid beta
 CC protein, amyloid-beta 40 (Abeta40) and amyloid-beta 42 (Abeta42),
 CC major components of amyloid plaques, and the cytotoxic C-terminal
 CC fragments, gamma-CTF(50), gamma-CTF(57) and gamma-CTF(59) (By
 CC similarity).
 CC -1- PTM: Proteolytically cleaved by caspases during neuronal apoptosis
 CC (By similarity). Cleavage at App-720 by either caspase-3, -8 or -9
 CC results in the production of the neurotoxic C31 peptide and the
 CC increased production of beta-amyloid peptides (By similarity).
 CC -1- PTM: N- and O-glycosylated (By similarity).
 CC -1- PTM: Phosphorylation in the C-terminal on tyrosine, threonine and
 CC serine residues is neuron-specific. Phosphorylation can affect APP
 CC processing, neuronal differentiation and interaction with other
 CC proteins (By similarity).
 CC -1- MISCELLANEOUS: Chelation of metal ions, notably copper, iron and
 CC zinc, can induce histidine-bridging between beta-amyloid molecules
 CC resulting in beta-amyloid-metal aggregates (By similarity).
 CC Extracellular zinc-binding increases binding of heparin to APP and
 CC inhibits collagen-binding (By similarity).
 CC -1- SIMILARITY: Belongs to the APP family.
 CC -1- SIMILARITY: Contains 1 BPTI/Kunitz inhibitor domain.

 CC -!- FUNCTION: Functions as a cell surface receptor and performs
 CC physiological functions on the surface of neurons relevant to
 CC neurite growth, neuronal adhesion and axonogenesis. Involved in
 CC cell mobility and transcription regulation through protein-protein
 CC interactions (By similarity). Can promote transcription activation
 CC through binding to APPB1/Tip60 and inhibit Notch signaling through
 CC interaction with Numb (By similarity). Couples to apoptosis-
 CC inducing pathways such as those mediated by G(O) and JIP (By
 CC similarity). Inhibits G(O) alpha ATPase activity (By similarity).
 CC Acts as a kinesin I membrane receptor, mediating the axonal
 CC transport of beta-secretase and presenilin 1 (By similarity). May
 CC be involved in copper homeostasis/oxidative stress through copper
 CC ion reduction (By similarity). In vitro, copper-metallated APP

induces neuronal death directly or is potentiated through Cu(2+)-
 mediated low-density lipoprotein oxidation (By similarity). Can
 regulate neurite outgrowth through binding to components of the
 extracellular matrix such as heparin and collagen I and IV (By
 similarity). The splice isoforms that contain the BPTI domain
 possess protease inhibitor activity (By similarity).
 CC -!- FUNCTION: Beta-amyloid peptides are lipophilic metal chelators
 CC with metal-reducing activity. Bind transient metals such as
 CC copper, zinc and iron. Beta-amyloid peptides bind to lipoproteins
 CC and apolipoproteins E and J in the CSF and to HDL particles in
 CC plasma, inhibiting metal-catalyzed oxidation of lipoproteins.
 CC -!- FUNCTION: Appicans elicit adhesion of neural cells to the
 CC extracellular matrix and may regulate neurite outgrowth in the
 CC brain (By similarity).
 CC -!- FUNCTION: The gamma-CTF peptides as well as the caspase-cleaved
 CC peptides, including C31, are potent enhancers of neuronal
 CC apoptosis (By similarity).
 CC -!- SUBUNIT: Binds, via its C-terminus, to the PID domain of several
 CC cytoplasmic proteins, including APBB family members, the APBA
 CC family, MAPK3IP1, SHC1 and Numb and Dab1 (By similarity). Also
 CC interacts with GPCR-like protein BPP, PPRL1, APPBP1, IB1, KNS2
 CC (via its TPR domains), APPBP2 (via BASS) and DDB1 (By similarity).
 CC Associates with microtubules in the presence of ATP and in a
 CC kinesin-dependent manner (By similarity). Soluble Abeta40 binds
 CC all three isoforms of APOE, in vitro and in vivo. When lipidated,
 CC ApoE3 appears to be the preferred amyloid binding isoform, while
 CC the apoE4 isoform-beta-APP40 complex is capable of being
 CC transported across the blood-brain barrier.
 CC -!- SUBCELLULAR LOCATION: Type I membrane protein. Cell surface
 CC protein that rapidly becomes internalized via clathrin-coated pits
 CC (By similarity). During maturation, the immature APP (N-
 CC glycosylated in the endoplasmic reticulum) moves to the Golgi
 CC complex where complete maturation occurs (O-glycosylated and
 CC sulfated) (By similarity). After alpha-secretase cleavage, soluble
 CC APP is released into the extracellular space and the C-terminal is
 CC internalized to endosomes and lysosomes (By similarity). Some APP
 CC accumulates in secretory transport vesicles leaving the late Golgi
 CC compartment and returns to the cell surface (By similarity). APP
 CC sorts to the basolateral surface in epithelial cells (By
 CC similarity).
 CC -!- ALTERNATIVE PRODUCTS:
 CC Event=Alternative splicing; Named isoforms=2;
 CC Comment=Additional isoforms, missing exons 7,8 and 15, seem to
 CC exist. The L-isoforms, missing exon 15, are referred to as
 CC appicans;
 CC Name=APP770;
 CC IsoId=Q60495-1; Sequence=Displayed;
 CC Name=APP695;
 CC IsoId=Q60495-2; Sequence=VSP_007221, VSP_007222;
 CC -!- TISSUE SPECIFICITY: Isoform APP695 is the major isoform found in
 CC brain. The longer isoforms containing the BPTI domain are
 CC predominantly expressed in peripheral organs such as muscle and
 CC liver.
 CC -!- INDUCTION: Increased levels during neuronal differentiation.
 CC -!- DOMAIN: The basolateral sorting signal (BASS) is required for
 CC sorting of membrane proteins to the basolateral surface of
 CC epithelial cells.
 CC -!- DOMAIN: The NPXY sequence motif found in many tyrosine-
 CC phosphorylated proteins is required for the specific binding of
 CC the PID domain. However additional amino acids either N- or C-
 CC terminal to the NPXY motif are often required for complete
 CC interaction. The PID domain-containing proteins which bind APP
 CC require the YENPTY motif for full interaction. These interactions
 CC are independent of phosphorylation on the terminal tyrosine
 CC residue (By similarity). The NPXY site is also involved in
 CC clathrin-mediated endocytosis.
 CC -!- PTM: Proteolytically processed under normal cellular conditions.
 CC Cleavage by alpha-secretase or alternatively by beta-secretase
 CC leads to generation and extracellular release of soluble APP
 CC peptides, S-APP-alpha and S-APP-beta, respectively, and the
 CC retention of corresponding membrane-anchored C-terminal fragments,
 CC CTF-alpha and CTF-beta. Subsequent processing of CTF-alpha by
 CC gamma-secretase yields P3 peptides. This is the major secretory

CC pathway and is nonamyloidogenic. Alternatively,
 CC presenilin/nicastrin-mediated gamma-secretase processing of CTF-
 CC beta releases the amyloid beta proteins, amyloid-beta 40 (Aβeta40)
 CC and amyloid-beta 42 (Aβeta42), major components of amyloid
 CC plaques, and the corresponding cytotoxic C-terminal fragments
 CC (CTFs).
 CC -1- PTM: Proteolytically cleaved by caspase-3 during neuronal
 CC apoptosis (By similarity).
 CC -1- PTM: N- and O-glycosylated. O-linkage of chondroitin sulfate to
 CC the L-APP isoforms produces the APP proteoglycan core proteins,
 CC the appicans (By similarity).
 CC -1- PTM: Phosphorylation in the C-terminal on tyrosine, threonine and
 CC serine residues is neuron-specific (By similarity).
 CC Phosphorylation can affect APP processing, neuronal
 CC differentiation and interaction with other proteins.
 CC -1- PTM: Extracellular binding and reduction of copper, results in a
 CC corresponding oxidation of Cys-144 and Cys-158, and the formation
 CC of a disulfide bond (By similarity).
 CC -1- MISCELLANEOUS: Chelation of metal ions, notably copper, iron and
 CC zinc, can induce histidine-bridging between beta-amyloid molecules
 CC resulting in beta-amyloid-metal aggregates.
 CC -1- SIMILARITY: Belongs to the APP family.

CC -1- SIMILARITY: Contains 1 BPTI/Kunitz inhibitor domain.

CC This Swiss-Prot entry is copyright. It is produced through a collaboration
 CC between the Swiss Institute of Bioinformatics and the EMBL outstation -
 CC the European Bioinformatics Institute. There are no restrictions on its
 CC use as long as its content is in no way modified and this statement is not
 CC removed.

CC -1- FUNCTION: Functions as a cell surface receptor and performs a
CC physiological functions on the surface of neurons relevant to
CC neurite growth, neuronal adhesion and axonogenesis. Involved in
CC cell mobility and transcription regulation through protein-protein
CC interactions (By similarity). Can promote transcription activation
CC through binding to APBB1/Tip60 and inhibit Notch signaling through
CC interaction with Numb (By similarity). Couples to apoptosis-
CC inducing pathways such as those mediated by G(O) and JIP (By
CC similarity). Inhibits G(O) alpha ATPase activity (By similarity).
CC Acts as a kinesin I membrane receptor, mediating the axonal
CC transport of beta-secretase and presenilin 1 (By similarity). May
CC be involved in copper homeostasis/oxidative stress through copper
CC ion reduction. In vitro, copper-metallated APP induces neuronal
CC death directly or is potentiated through Cu(2+)-mediated low-
CC density lipoprotein oxidation (By similarity). Can regulate
CC neurite outgrowth through binding to components of the
CC extracellular matrix such as heparin and collagen I and IV (By
CC similarity). The splice isoforms that contain the BPTI domain
CC possess protease inhibitor activity (By similarity).
CC -1- FUNCTION: Beta-amyloid peptides are lipophilic metal chelators
CC with metal-reducing activity. Bind transient metals such as
CC copper, zinc and iron (By similarity).
CC -1- FUNCTION: The gamma-CTF peptides as well as the caspase-cleaved
CC peptides, including C31, are potent enhancers of neuronal
CC apoptosis (By similarity).
CC -1- SUBUNIT: Binds, via its C-terminus, to the PID domain of several
CC cytoplasmic proteins, including APBB family members, the APBA
CC family, MAPK8IP1, and SHC1. Numb and Dab1 (By similarity). Binding
CC to Dab1 inhibits its serine phosphorylation (By similarity). Also
CC interacts with GPCR-like protein BPP, FPR1L, APPBP1, IBL, KNS2
CC (via its TPR domains) (By similarity), APPBP2 (via BaSS) and DBP1.
CC In vitro, it binds MAPT via the MT-binding domains (By
CC similarity). Associates with microtubules in the presence of ATP
CC and in a kinesin-dependent manner (By similarity).
CC -1- SUBCELLULAR LOCATION: Type I membrane protein. Cell surface
CC protein that rapidly becomes internalized via clathrin-coated
CC pits. During maturation, the immature APP (N-glycosylated in the
CC endoplasmic reticulum) moves to the Golgi complex where complete
CC maturation occurs (O-glycosylated and sulfated). After alpha-
CC secretase cleavage, soluble APP is released into the extracellular
CC space and the C-terminal is internalized to endosomes and
CC lysosomes. Some APP accumulates in secretory transport vesicles
CC leaving the late Golgi compartment and returns to the cell
CC surface. Gamma-CTF(59) peptide is located to both the cytoplasm

CC and nuclei of neurons (By similarity).
CC -1- ALTERNATIVE PRODUCTS:
CC Event=Alternative splicing; Named isoforms=3;
CC Comment=Additional isoforms seem to exist;
CC Name=APP770;
CC IsoID=PS3601-1; Sequence=Displayed;
CC Name=APP695;
CC IsoID=PS3601-2; Sequence=VSP_000010, VSP_000011;
CC Name=3;
CC IsoID=PS3601-3; Sequence=VSP_013360, VSP_013361;
CC -1- DOMAIN: The basolateral sorting signal (BaSS) is required for
CC sorting of membrane proteins to the basolateral surface of
CC epithelial cells (By similarity).
CC -1- DOMAIN: The NPXY sequence motif found in many tyrosine-
CC phosphorylated proteins is required for the specific binding of
CC the PID domain. However additional amino acids either N- or C-
CC terminal to the NPXY motif are often required for complete
CC interaction. The PID domain-containing proteins which bind APP
CC require the YENPTY motif for full interaction. These interactions
CC are independent of phosphorylation on the terminal tyrosine
CC residue. The NPXY site is also involved in clathrin-mediated
CC endocytosis (By similarity).
CC -1- PTM: Proteolytically processed under normal cellular conditions.
CC Cleavage by alpha-secretase or alternatively by beta-secretase
CC leads to generation and extracellular release of soluble APP
CC peptides, S-APP-alpha and S-APP-beta, respectively, and the
CC retention of corresponding membrane-anchored C-terminal fragments,
CC C83 and C99. Subsequent processing of C83 by gamma-secretase
CC yields P3 peptides. This is the major secretory pathway and is
CC nonamyloidogenic. Alternatively, presenilin/nicastrin-mediated
CC gamma-secretase processing of C99 releases the amyloid beta
CC proteins, amyloid-beta 40 (Abeta40), and amyloid-beta 42 (Abeta42),
CC major components of amyloid plaques, and the cytotoxic C-terminal
CC fragments, gamma-CTF(50), gamma-CTF(57) and gamma-CTF(59) (By
CC similarity).
CC -1- PTM: Proteolytically cleaved by caspases during neuronal apoptosis
CC (By similarity). Cleavage at Asp-739 by either caspase-3, 8 or -9
CC results in the production of the neurotoxic C31 peptide and the
CC increased production of beta-amyloid peptides (By similarity).
CC -1- PTM: N- and O-glycosylated (By similarity).
CC -1- PTM: Phosphorylation in the C-terminal on tyrosine, threonine and
CC serine residues is neuron-specific. Phosphorylation can affect APP
CC processing, neuronal differentiation and interaction with other
CC proteins (By similarity).
CC -1- MISCELLANEOUS: Chelation of metal ions, notably copper, iron and
